A RESUME OF THE PROCEEDINGS OF THE 7TH CONGRESS OF THE FAR EASTERN ASSOCIATION OF TROPICAL MEDICINE.

December 5th, 1927.

The Delegates and Representatives of the different countries attending the Congress hegan to arrive in Calcutta from December 1st onwards. They were met on arrival by the General Organizing Secretary and the Local Secretary Treasurer supported by a number of voluntary helpers who assisted the delegates to dissembark their luggage and directed them to their places of residence

Saturday, December 3rd.

The Information Bureau at the Congress huildings was open throughout the day for the registration of members, the distribution of membership cards and badges and invitations and the selection of excursions

Sunday, December 4th.

The Information Bureau was again open from 10 Au to 4 PM At 4 PM the General Meeting of Official Delegates and Representatives with the President Major General T H Symons, in the chair, was held at the Congress buildings to nominate members to the Council of the Association Immediately afterwards the first Council Meeting was held, the President again presiding Special Church Services in connection with the Congress were field in St. Paul's Cathedral (Church of England) and in St. Andrews Church (Church of Scotland)

Monday, December 5th.

The 7th Congress of the Far Eastern Association of Tropical Medicine was officially opened by His Excellency the Governor of Bengal at the University Senate House at 10 a sr Over 900 distinguished guests, delegates and members attended the function His Excellency first read a message of welcome from His Excellency the Vicercy and then addressed the assembly. The Preadent of the Association, Major General T H Symons Director-General, Indian Medical Service, next delivered his presidential address The official proceedings then terminated and the delegates proceeded to the opening sessions of the scenatific sections.

The number of scientific communications received necessitated their allowed into six separate sections which met more or less simultaneously throughout the week.

The morning from 11 a u to 1 r m was occupied by the opening sessions of Calairas, 1 A (Medicue), 111 (Plague) 1 B (Surgery), V (Nutritional diseases) and I C (Dentistry) (See Scientific Programme)

By special arrangement beforehand the section on Plague was held as to B & T W and the Expert Plague Committee ions All the above sections the afternoon sessions from At 4 30 PM the Director and Staff of the Calcutta School of Tropical Medicine were 'At Home' to the foreign official delegates and members and their wives and later to all members of the Congress. This furction coincided with the opening of the Scientific Exhibition which was for the most part housed therein and the members spent a very enjoyable afternoon inspecting the chool and the exhibition.

At 930 r m the official delegates and members attended a reception given at Government House by His Excellency the Governor of Bengal Many of the delegates had the honour of heing pre-ented to His Excel ency and the Hon hie Lady Jackson They also had the opportunity of meeting each other and many of the leading entirens of Calcutta The Commercial Exhibition was open to members of the Congress throughout the day

Tuesday, December 6th.

The morning from 10 to 1, and the afternoon, from 2 to 4 were wholly occupied with sectional meetings under the chairmen of the various sections

At 1 o'clock the foreign delegates were entertened to lunch by the Calcutta Rotary Club when an eddress on the International Relationship of India in rigard to Public Health was delivered by Col J D Grabsin I M S the Public Health Commissioner with the Government of India

Between 4 and 7 pm separate parties of members visited the Calcutta Medical College the Presidency General Hospital and the Indian Association for the cultivation of Science where Professor C V Raman FRS, gave demonstrations of his work on surface tension and λ ray analysis

During the afternoon the Bengal Presidency Council of Women gave a garden party in the grounds of H E the Vicetoy a readence Belvedere, to which all the lady members and wives of members of the Association were theyted

At 9 30 PM Six J C Bose, CS I , CLE , FRS , gave an address on plant and animal response to various attificial stimuli which was well attended by the members of the Congress

Wednesday, December 7th.

The Scientific Sections met once more between 10 to 1 and 2 to 4 eccording to the pre arranged programme. A demonstration of cinema films of Public Health interest was given at Madan's Cinema theatre to members of the Congress between 2 and 4

At 4 30 P sr the Assatic Society of Bengal gave an interesting 'At Home' to the foreign members of the Congress when the valuable literary and art treasures belonging to the Society were laid open for inspection. In the evening the Trustees of the Indian Museum provided a very successful conversazione in the Museum at which His Excellency the Governor and the Hon'ble Lady Jackson were present and to which all delegates and members of the Congress were invited. The vanious departments of the Vuseum were exhibited to the members by the retail of the nurseum

Thursday, December 8th.

The 2nd meeting of the Council was held in Committee Room No I at 9 AM

The Scient fie Sections held their meetings as usual from 10 a m to 1 $_{\rm P\,M}$ and 2 to 4 $_{\rm P\,M}$

The Expert Plague Committee of the League of Nations with colopted expert members of the F E A T M met in committee to consider recommendations as to important lines of forther investigation in regard to Plague From 2 to 4 r m a second demonstration of cinema films of scientific interest to the Carmichael and the committee of the Carmichael and Chemical American Chemical American Chemical Chemica

Friday, December 9th

The reading of papers and discussions in the various Scientific Sessions again occupied the time from 10 a m to I P m and 2 to 4 P m

The Expert Pague Committee of the League of Nations held its second meeting

During the course of the afternoon the members attended a garden party at Government House given by H E the Governor and the Hon'lile Lady Jackson where they once more had the opportunity of meeting the entirens of Calcutta Dr Rahudranath Tagore at 6 o'clock gave a special performance of his play 'Rituranga' at his own house to which he invited the foreign members and their wives

Saturday, December 10th.

The 3rd meeting of the Council was held at the Congress buildings at 9 a m.

From 10 to 12 Am the final meetings of the scientific sections were held to complete the business of the sections and pass resolutions. The general business meeting of the Association was held in the University Senate House at 12 noon. Sir Muhammad Habbullah, the Hon'b's Member of H. E. the Viceroy's Council for the portfole of Education, Health and Lands, attended the meeting and addressed the delegates at its conclusion. He also paid an official visit to the Congress buildings and inspected the scientific and commercial exhibitions during the course of the afternoon.

The afternoon from 2-30 onwards was devoted to excursions to various places of interest in the locality. A large party of delegates and members were the guests of the Port Commissioners and undertook a river trip to the Botanical Gardens where they had tea Other parines visited the Calcutts Water Works and the Anti mislaria Co-operation Scorety's work at Painhati and others again patronized organized excursions round Calcutta visiting the temples, human glabits and other well-known algabia of the city

The Congress Dinner was held at 8 P.M at H E the Viceroy's residence, Belvedere, graciously lent for this purpose by His Excellency the Viceroy. H E Srr Stanley Jackson presided and the Hon ble Ludy Jackson graced the occasion with her presence Over 400 ast down to dinner During the

to a close

The Congress Exhibition

Cycesses an exhibition was organized is exhibition was organized is exhibition was divided into two The object of the former was to place before the Congress some of the recently work which is at present being done in India in connection with medicine, surgery, public health veterinary science and other operalities

The latter showed samples of medical equip Indian The maide is and its and is and its an

their friends. Both exhibitions in spite of the small amount of time available during the Congress week, were well attended by the delegates Sir Muhammad Habbiullah the How ble Member for Education Health and Lands visited the exhibitions on the afternoon of December 10th Separate catalogues were prepared for each Exhibition. These will be included in the completed Transactions of the Congress By order of the Council a diploma of ment was resued to the firms who exhibited in the Commerci I Exhibition.

MESSAGE FROM HIS EXCELLENCY THE VICEROY TO THE DELE-GATES AND MEMBERS OF THE 7TH CONGRESS OF THE FAR EASTERN ASSOCIATION OF TROPICAL MEDICINE.

'It is with great pleasure and with a keen sense of the importance of the occasion that I welcome your Association to day India early recognized the possibilities of the movement which started, I understand by the enter prise of a small group of earnest until now it enthraces nearly al.

recognized as the most represent with the public health and disc

highly gratified to have the opportunity of welcoming its members to India, where there are still such great opportunities for those interested in medical research. Indian representatives on your Association have been hospitably entertained in the past in Mania, Honglong, Saigon, Java, Singapore and Tokyo I trust that our guests may carry away as pleasant recollections of the Congress as our own delegates preserve of previous gatherings ele-withers.

'I wish your Congress all success I feel sure that the free interchange of thought and the opportunities for meeting, under pleasant social conditions,' workers of different nationalities and of varying experience will have a real value for those who are gathered here to day.'

E RIGHT GOVER-THE TTH

GENTLEMEY,

€

I deem it a great privilege to have the honour of opening this Congress to-day. His Excellency the treery has asked me to convey a message to you which I will how read.

(His Excellency then read H E the I serro's message)

Gentlemen this is the Seventh Congress of the Tar Eastern Association of Tropical Medicine though it is the first to be held in Calcutta.

The history of medicine in India begins with the I edas, which are beheved to date hock to 1500 BC, but the best known names in connection with Indian medicine are Sushruta and Chiraks who flourished about five or six hundred years before the beginning of the Christian era

Their writings are, I understand still revered by many practitioners of medicate in Ind a and all of us can unit in paying homage to these great men of old who lived and worked before the time of linpocrates

The modern history of medicane to Calculta contains some names of special interest to workers on tropical diseases. The names of Timothy Lewis and Cunn ninham will be familiar to many of you. Their work was done at a time when interest in incidical research was low and so their discoveries have not received the recognition which they describe.

he could not be totaled and wrested from

Nature her seasons; guarded secret of the transmission of maluna. It is a matter of great regret that Sir Ronald now full of years and honours is prevented by ill health from being with us to-day

You are also familiar with the work of Sir Leonard Rogers who worked for many years in the Medical College where many of your meetings will be held

Sir Leonard was not merely a research worker, but was responsible for the erection of the new School of Tropical Medicine and Hygens in which a small band of workers are engaged in pursuing the researches which were done by Ross and chool in Calcutat

d perseverance

There are men who are now engaged in medical research in Calcutta and

the one in a perfect on all attents and the other countries of the first hast as well as workers from America and Europe

Nour presence here is most gratifying and for two reasons one is that we may show you what is being done here, and what is perhaps more im portant, that we may learn from you and obtain suggestions for the improvement of our work

Among our malacan - 4 - • • m the domain

they possess a

many of them have fought all their professional lives with these enemies of humanity and in many cases have defeated and exterminated them

During your visit you will discover and appreciate the vastness and complexity of the problems which confront our workers in India, and if you make your survey of India in a sympathetic spirit, you will probably realize the serious efforts which are being made in Bengal and all over India for the control of discases

From the early days of British rule in India the importance of public health was realized but the policy of Government was hased on the view that it was necessary, first of all, to educate the people and to secure their goodwill towards public health measures. For this reason attention was first concentrated chiefly on medical relief. This may not have heen the quickest way, but it was probably the surrest and safest and that the policy has justified itself is proved by a steadily growing demand not merely for doctors, but also for health officers

Prevention is better than cure, but we cannot force preventive measures on unwilling people any more than we can compel a horse to drink merely by bringing but to the water

There are some bopeful signs in Bengal I am informed that thousands of people are coming for intravenous injections for the treatment of kala azar, which is one of our special scounges

Inoculation against cholera is readily accepted by people who a few years ago would have resisted to the death. People with early leproy are common forward in numbers for treatment, and generally there is a gratifying increase of the receptiveness of the people for modern methods of treatment and prevention of disease. Another hopeful sign of the times is the raind rise of voluntary co operative societies for the control of malaria and kalazar the success of these is chiefly due to the efforts of a former Assistant of Sir Leonard Rogers—Rai Bahadur Dr Gopal Chandra Chattergee

The awakening of a spirit of self help is a great advance, it greatly facilitates the work of Government agencies and it is likely that Dr. Bentley will be able to show you how rapidly the attitude of the people is changing Apathy and indifference are disappearing and in many places there is an embarrassing demand for preventive measures, especially against cholera. More inoculations against this disease have been carried out in the past few months than in all the years since the introduction of anti-cholera inoculation. If we lay stress on the hopeful again you must not magne that we minimize the difficulties which still be ahead—the obstacles to advance have not yet been swept away, but it is important that they are legiming to yield and it is likely that we are approaching a period of interest in public health, which will require even more tactful handling than the prolonged apathy of former generations.

Research work appears to have outstrapped the practical application of the results of research but we cannot afford to call a halt in research. Every ne v important discovery has a great value in promoting the efficiency and economy of public health measures.

The recent discoveries in connect on

Such a Congress as this should be welcomed to Bengal as a relieving army to the hes eged. We in the Presidency are unfortunately the victims of several virulent scourges such as cholers which at the moment is very rife malazin and kala azar and we are hopefully looking to the results of your deliberations to help us along the road towards some retief.

I heg to offer this Congress a hearty welcome to this city and to Bengal and to express the hope that their stay here may prove enjoyable and that your memories when you leave will be in all respects sat sfactory and agree able. PRESIDENTIAL ADDRESS DELIVERED BY MAJOR-GENERAL T. H SYMONS, C.S.I., K.H.S., ILMS., DIRECTOR-GENERAL, INDIAN MEDICAL SERVICE, PRESIDENT, 7TH CONGRESS, F. E. A. T. M AT THE OPENING CEREMONY, DECEMBER STH, 1927.

YOUR EXCELLENCY, LADIES AND GENTLEMPY.

It is m a welcome the great and country in order to attend this conference, and for this reason we are all the more pleased to see you. This is the first time the F E A T M has honoured India in making it its centre of activities, I can only hope that it will not be the last I can assure those who have come from afar that India is prepared to give you of its best and we hope most sincerely that you will go away with very pleasant recollections of your visit.

As President of this great assembly I am sure you would like me to take this opportunity of expressing our thank to the Excellency Lord Irvin the Viceroy of this great country for his message of welcome, sympathy and encouragement which His Excellency Six Stanley Jackson has just read out to us. It is most fortunate that we should have at the head of the administration of this country a man of such sterling qualities, immense capabilities and sympathetic tendencies towards our work, and we regret most sincerely, that His Excellency is not able to be here to day. Our thanks are also due to His Excellency for perm ting us to hold the conference dimer at his Calcutta residence, viz. Belvedere. This concession we greatly appreciate, and consider the great booms conference during the great state of the standard or the standard or the state of the standard or t

His Excellency Sir Stanley Jackson, the Governor of this Presidency most kindly consented to open the conference and it is my pleasurable duty. Sir to thank you on behalf of all present, not only for coming here to-day and opening the conference at no measurable inconvenience to yourself but also for taking such an interest in the proceedings and extending your hospitality to members at a Garden Party and a Reception at Government House. We greatly appreciate the alertity with which you so kindly on Saturday.

I would his also to thank this City of Calcutta for the welcome which it has extended to the members of the congress. Everything that the office beaters have asked for his been granted and all who have been approached have been unstituting in their efforts to make the meeting a success. One has to remember that life in a city like this is very stremous. Fvery body, who is any body, is bard at it from early morning to dewy eve. Knowing this fact therefore, we appreciate all the more what has been done and are correspondingly grateful.

I do not know if this is the time and plues for thanking individual member of the staff but I would like to put it on record how much we appreciate the work done by the General Organizing Secretary, Colonel Cunningham

It is he vho has been the life and drive of aff the arrangements and I feel sure that you will most he with endorse my remarks when during the period of your stay in India you begin to realize for what he has been responsible

Reason for these Conferences—These Conferences—and the same applies to all medical conferences the world over—are held for mainly one purpose, it the increase of our knowledge of disease Pace, religion colour and sect form no barriers where scientific medicine is concerned. If we as a

It is an important feature of each congresses as this that they emphasize to our profession and to the public the great importance of measures against disease in tropical countries and bring home to the Governments of such countries a fuller realization that the organization of an adequate public health administration is one of the greatest of their many responsibilities.

Herlers—Whenever I think of the work done and often under the most adverse condutions by the members of nethod centrific associations at always leaves me with two very satisfactory feelings. The first is the amount of work which is being carried on whereby the secrets of natine are being investigated and turned to the advantage of mankind generally the second that I have the honour of being a member of that profession which I have no hestation in saying is second to none. Instances are many where the work or has gone out into the graden of pestilence never to return. The death in 1924 of Mijor Cragg I VIS from typbus lever which he was investigating was a senious loss to our research department while the recent trage death of Adrian Stoke is so fresh in your memories that it requires no words of mine to remind you of it. He met his death whilst putting the finishing touches to an investigation of one of the most virulent and fatal diseases known to man. We learn from his latest de-spatches that—to quote his own words—to man.

We have the fish hooked all right and unless we are careless and break the tacklet will only be a question of time—and yet when the goal was no sight and the lattle practically won he who was bright responsible for all that had been done was not allowed to see the ultimate and successful results of his lid ours. Ladies and goutlemen it is men like Gragg and Stokes whom we honour and admire—and since fast derived that their lives should be forful for the work that they accomplished it is will not prevent other workers putting that made to the plough and luringing to a compil too that which they had so nearly finished. Those who are trying to wrest from Nature her secrets in connection with dresses are invariably faced with diangerous powil ulties but they take the e-risk knowing full well that the knowledge gamed will it, well worth the risk molived?

m ion with this Ass scord in the Year Then three

In looking up previous Presidential addresses I note there has been no uniformity in the subject selected by the various past Presidents, so with your kind permission I am going to take as my theme the principal epidemic diseases encountered in this country pointing out, where possible, what has been done and noting in presing the difficulties which are constantly with us I have ventured to adopt this method of procedure because of the im

Then we have Burma which is 3 days by sea from Calcutta

Now, ladies and gentlemen, you will realize from what I have just read out to you that India is not a country, in the ordinary sense of the word,

a If you grasp this fact you will at

of tackling all the interesting and im

portant questions which arise in connection with epidemic diseases

Another point—India is a country of many races, religions and languages. It is may say there are many languages, religions, etc., even in Europe, but I can assure you that the north and couth inhabitants of Furope are by no means so lar apart as the north and couth population of this country. If I were asked to point out similarities between the Pathan of N W. India and the Tamil in Tuticorn I would find it difficult to do so

2 1.1 that ras

country is state aided and the state or rather multiples of states are-like most other states in the world-in a chromic condition of trying to balance their budgets. Help from private individuals, those who could afford to come forward handsomely, is not so frequent as we would wish. Moreover, when we are presented with a hospital very rarely is it endowed so that not infrequently its utility is seriously interfered with for want of funds. Then we have the psychology of the population to consider The average individual either through ignorance or apathy-more frequently the two combineddoes not want any improvement in the standard of living He is quite content to carry on in the same groove as his ancestors did before him, and you may take it from me that it takes a mighty hig solt to shift but out of that rut There are some who speak disparagingly of the work done by the medical profession in India They either know nothing concerning the subject, or do not realize what the profession is up against. There may be instances where individuals have not perhaps given of their best , that applies to every walk in life, but, speaking as the bead of the medical profession in this country, I can assure you that we are quite prepared that our work should be judged by the best of all judges and critics, viz, time, feeling confident that the mound of knowledge which we have helped to erect, the work which has been carried out, on occasions even with loss of life, will stand as a monument to our activities and testify to what was done to try and improve the conditions 1 40 -- 42

world wide nature I bave only to mention cholera and plague to create

many thoughts and remmd you of many incidents in connection with these two scourges. Then again India is rife with diseases like enteno fever indiana, veneral, kala-azar, amalipox and the like. A 'ot has been done

sh n India

Affaths on April 2nd during a period of 90 days and only 53 cases of yields on April 13th. Actual number of spatially discovered to the state of the

4 of Smallpox 35 of Pneumonia.

7 of Dysentery requires the spark to bring about an enormous St of wheth proved to onthreak I visited the town just hefore the most important day and was greatly impressed by the

prophly-texte measures which had been put into practice. Protection of such a number against cholera by mooulation was impossible, oven if the plignms had been willing to subruit to it. I have mentioned the above incident, because it demonstrates concretely the kind of problems which the public braith cepartment is called upon to face in Judia and, incidentally, the very thorough manner in which it was tackly

Plague is another disease which causes us a great amount of anxiety. It was first introduced into Bombsy in 1896, and, finding a suitable soil, and

an ameniate and complete evacuation of the infected area. Thanks to the original work done in the Research Institute at Rombay a vaccine was discovered which has proved to be most effective as a prophylacit. Ownsidary immense quantities of this prophylacitic are heing used annually. In the Province of the Punjah alone seven lakhs (700 000) of doses were given during 1926. This will give you some idea of the work. Such of you as go on the four will be able to see the large scale production of this vaccine at the Haffkine Institute Bombay.

Malaran yearly claims many victims in fact far too many. The preven tion of this disease in a country like India is a matter on which those of you who are interested will be able to take part in the discussions of the scientific sessions. We are deeply corry not to have had Sir Ronald Ross himself to take part in these discussions the more so in that h is absence has been due to ill health. I am glad jo say however that we have with us Sir Videolm Watson Professor Stephens and Colonel James all of whose work on this discrese is so well known.

India is a land of extremes and the variation in conditions between the monoson and the dry season is one of our special difficulties. The age long excavations around the villages and habitat ons is another difficulty less known in newer lands. In your tour you will have an opportunity of seeing some of the anti-malarial problems and the work done and still to be done at the Imperial Capital of Delhi and some other places.

Other diseases which are very prevalent in India are ankylostomiasis, especially in Madray Assum and the West Coast where the climatic conditions are exceptionally favourable for its existence and spread kala arat which was a great stumbling block to the profession owing to its confus on with chronic maliaria before Leishman and Donora discovered the body named after them I can remember the days when the death rate of this disease was approaching 100 per ceat but now thanks to the discovery by Vianna of the value of tarriar emetic in leishman asis and the recent great extension of the intravenous use of antimony salts more especially in India this disease has now lost muny of its terrors.

Leprosy a disease concerning the treatment of which up to recent years very little more was done than what we read was practised in the early Chrest and an Now thanks to recent investigators much more light has been thrown on it and there is every hope that in time to come we shall assume control of this foul disease.

Relaps ng fever is now attracting great attention and is proving to be used interesting and clusive disease. Time will not permit of my dealing with tubercle or dysentenes enterior tever and other alined bowel complaints. I am very pleased to say however that in this connection we have with at this Congress Prof. Sings whose name is a household word with all of us and Dr. D Herelle the discoverer of that mysterious principle the bacterior phase now receiving so much attention in many parts of the world.

A venereal diseave has attracted special attention during the past few years. A special commission from England sent out under the auspices of the British Social Longue last rold weather travelled throughout India and Burma Their report was most interesting and I amcerely hope that the recommend at one which it embodie I will be put into practice by all the Governments concerned. I am glad to be able to welcome in this respect among our numbers Professor Hatr. who with Professor Ebrich was respon like for this great I son to humanity. Salvarson and all that went with it discovery

We have in India a Central Research Institute locate i in the hills at Kasauli an I numerous other mistitutions of a file nature scattered throughout the country. There is now this very excellent Tropical School of Medicine here in Calentiti. We have a bacterological service and an organization and constitution for research which we have found very valuable. The work done by officers of this country has a world wisk reputation. What Leonard Rogers has done for cholera. Poss and Christophers and others for malara, Latton Haffline Vackie and others for largue Young to Perposy Donovan, Patton. Vackie Knowles. Napier Shortt and Smith and others for kala axis and Harry Brown and Ivenger for vacient therapy Yandyke Carter Mackie Crage. Cunningham and others for approchatal disease is so well known that it is unnecessary for me to dilate upon it. Their work requires no praise from my humble hips even if I were able to find words in which to do them juvie humble hips even if I were able to find words in which to do them juvie humble hips even if I were able to find words in which to

Before I conclude I must say a few words about the medical work done which does not come under the classification of epidemics and juilbie lettle Our hospitals although some of them are not so up to date as we would with a revery fine fundings and have been built to suit the climate of the country. There is any amount of good work being curred on in the surgical and metical wards of these hospitals and if it does not come into the public eye like our pull to health problems I nesure you the work is no less important. You will have an opportunity of visiting our Presidency town loopitude and colleges and will I have no don't form your own opinion as a result of your visit.

We are particularly groud of the work done in connection with eve diseases which are no prevalent. The names of Lihot Smith Airkpairick. Herbert and Wright are well known to you. Also in the (41 bills) is opital and school in Madras we recken we have an institution which of its kin is secon to none. I would also mattern that those of you who elect the southern tour will find in Madras a maternity loopital and school which through the triefes energy of the late Major General Ber Gerald Gifford who was in charge, of the loopital for many years can stand comparison with any similar in futtor in matter where it be

Special measures in connection with too cal discusses are much the same as in other countries except that in India there are a very large number of stone cases in connection with which the name of Freyer stants out praemments! I lephantries upon which discusse as paper will be read at this congress and in connection with which the Late Colonel Mutland of Mi liradul so much joiner surgery. Intestinal lesions demanding surgical interference are mostly connected with the appendicular and gastro-duodenal trouble, for which in one large institution a very large number of short circuits are done annually

The treatment of tropical abscess of the liver, so called has undergone a complete change during the past 30 years, thanks to the work done in this connection by Rogers. The needling for a hepatic abscess has almost become an operation of the outpatient department, a praiseworthy advance on the days when we opened and drained the abscess thereby runing the risk of secondary infections which were so frequently followed with a fatal result

I could go on giving instances of the change and improvement of the work done in our hospitals ad infinitum but must stop for fear of wearying you with too many details

the good work in this land of India We might say immense. In the face of great we mean and are trying to place this sub-

we mean and are trying to place in succontinent in its proper place in the world of scientific medicine and we hope when we leave that those who follow will see that the position is main tained

Ladies and gentlemen I have finished I trust as a result of our deliberations during the next few days some new light on disease—more especially tropical disease—will be elucidated, and, if this be so, the Congress will not have been held in vain I wish the Congress every success.

HIS EXCELLENCY THE GOVERNOR OF BENGAL'S SPEECH AT THE CONGRESS DINNER, DECEMBER 10TH, 1927.

GENTLEMEN.

It is a great pleasure and privilege to propose for your acceptance the toast of the Far Eastern Association of Tropical Medicine. We, in India, have every reason to give a sincere response to such a toast, as there is no country in the world which has more cause to be thankful to cientists for the services she has received in the past, or more cause to hope for further assistance, which she urgently requires in the future. She has reason to be particularly grateful to many who have assembled here thus last week during the meeting of the Congress. There is scarcely any tropical discase known to men, to the obtaining control of which they have devoted their professional skill, which does not afflict the people of Indra. In many countries in the Last they have laboured towards the chimiston of these sourges with remarkable success, and during this Congress they have willingly and generously

when pro-

The first of the second of the

It must be to your eternal credit that the only recompense you desire and receive is the gratitude of humanity

I am glad to hear that your Congress has been a success this has been due to the excellent organization for which Colonel Gunningham and Colonel Stewart has a been responsible, and they were loyally helped by the co-operation of everyone who attended the Congress

In welcoming you to Galcuite, I expressed the hope that you would be able to give us useful advice in connection with our grave problems of disease I understand that my hopes were amply justified and that our medical men have received much help, summlation and encouragement. We trust that our guests and you may derive satisfaction by knowing that hundreds of benefited from knowled.

ocuented from knowled

will convey to many others the information which has acquired, and in this way is a figure of the convey to many others the information which he has acquired, and in

of the

or the might create a feeling that the problem was solved and that further research was unnecessary

On the other hand, it is satisfactory to know that there has been a remarkable degree of unanimity as to the princtical measures, which are necessary to cope with such diseases as malara, cholera, plague and kala atar. While you all agree that more knowledge must be acquired, you also agree that more use must be made of knowledge which at present exists. Governments and local bodies will now have confidence in pushing forward measures which have received the approval of distinguished experts from every part of the world. We, in Bengal, are glad to learn that the great campaign of inoculation against cholers which is in progress, is regarded as one of the most effective methods of controlling the disease. It is not the only measure but when we are attacking an enemy like cholers we cannot afford to neglect any weapon which has been proved to be effective.

The problem of kala azar has been fully and ahly discussed at your Congress and I am told that there is general agreement that the line of research, which was opened out by workers at the Calcutta School of Tropical Medicine, and the Kala azar Commission, is regarded as heing full of hope. The methods of treatment are already satisfactory, but further improvements can be looked for

I was interested to hear that the food supply of the people of India had received very special attention at the Congress. This subject makes a special appeal to laymen, who not infrequently conduit dietetic experiments on themselves, though these are not always scientific.

I understand that you have spent some time in conside-ing the raveges of the uniquitous and uniquitous modeution—those melevolent messengers of malaria. Your unanimous decision on their activities and how to meet them must prove a most acceptable guide to the health departments of Govern ment. I am hopeful that you will yet teach the mosquitor when it takes its evening meal from me that the mark of its gratitude it leaves behind would be more acceptable if less pronounced.

In proposing this toast I must not forget the ladies who have accompanied the Congress and who have graced our proceedings and honoured Calcutta by their presence. Their interest and assistance are a great stimulant to those who devote their lives to research in tropical diseases.

I have to couple the toast with Dr Heiser of the U S A and Dr Deggeller

arer of the

Association

The value of this Congress which you have just completed is unquestion able, and with all succertly and gratitude I now give you the torst of the Congress of Far Eastern Association of Tropical Medicine

THE AGENDA AND MINUTES OF THE BUSINESS MEETINGS AND MEETINGS OF THE COUNCIL OF THE 7TH CONGRESS, F. E. A. T. M., 1927.

General Meeting of Official Delegates in Meeting Room A, Congress Buildings, December 4th, 1927.

Agenda.

- 1 Appouncements from the Chair
 - . Nomination of members to the Council

Minutes

- in connements from the Chair —The following telegrams of good wishes nere received
 - (1) From Dr Otton Weltevreden, Java Best wishes for successful Congress
 - (...) From Rai Bahadur Mambar Dutta Dibruguch -
 - 'Hearty thanks for invitation to Calcutta Tropical Concress Extremely regret inability to attend same owng to su iden indisposition. Wish it a splendid success
 - 3, From Dr Bijaising Masuda Ajmer -
 - 'Wish every success to Congress Sorry can't attend owing to
- 2 Nomination of Members to the Council —The following members of the Association were elected Members of the Council for the 7th Congress —

The rules of procedure prepared by the General Organizing Secretary were accepted with the following amendments —

Rule No 7-Discussions Omit 'at the conclusion of the sitting'

It was proposed by Dr. Heiser that a blackboard be placed in each section and that the name of the author reading the paper should be written up

6 Venue of the next Congress—Λ cable from Honolula and the letter written by the Official Chinese Delegates were read to the Meeting for information.

Major Hitchens (Manila) in a short speech expressed the wish that the 8th Congress should be held at Manila

8th Congress should be held at Manila
Proposed by Colonel Vedder and seconded by Colonel Morison that a
Committee be appointed to consider and report to the Council the most surt

An amendment was proposed by Dr Hoops and seconded by Sir Malcolm Watson that no such committee be appointed. The amendment was carried by 26 to 7 votes. It was agreed that the question be discussed at the 2nd Meeting of the Council.

able venue of the next Congress

4 Place and time of the second Council Meeting —It was agreed that the second meeting of the Council be held in Committee Room No 1 at 9-0 AM on Thursday. December 8th

5 Any other business—Dr Wellington stited that his Government had informed him that they considered that the Congress was being held at the footgress was being held at the footgress in the real parts. The proportion was seconded by Dr Deggeller who considered every by years.

T H SYMGNS, May-Genl, I M.S., President, 7th Congress, F E A T M.

Additional papers in Connection with the 1st Meeting of Council.

Reference No 1 of Agenda

REPORT OF THE GENERAL SECRETARY-THEASURES, DR O DEGGELLES, DATED WELTEVREDEN, JAVA, 18TH NOVEMBES, 1927

Officers

British India — Colonel Breset, J M S., Director of Public Health Service, Ragoon, Burma, informed me on the 4th of October, 1920 after having been consulted by Brevet Colonel S R. Christophers, to have handed over his duties as Honorary Local Secretary for the Congress as the Province Burma was found to be too solated from the crest of India.

Durma was tound to be too bouler from the rea of hairs

China—Dr. Lim went for a year's study to Europe during which time

Dr. Hanng Teefang Central Epidemic Bureau, Temple of Heaven Piking,

on Dr. Wu Leen Tele a solven, has been nominated by me as Acting Honorary

Local Secretary for (North) China—Information as to Dr. Lim's return has

not yet been received

Federated Maloy States — D. Wellangton went on levve but was expected to be back in October 1927 Dr. W. Fletcher retured and went to Europe When receiving this news I felt obliged to express my regrets, also in the name of the Association of Jesusy in him one of the great workers for the Eastern Edicated Secucies and to state my hope that he would keep in touch with the Association and that he would enjoy with Mrs. Fletcher, his life in Europe in perfect health.

On his advice Dr A Neeve Kingsbury, Institute for Medical Research, Kuala Lumpur, has been appointed as Honorary Local Secretary Treasurer

Hongkong - Dr W B H Moore went on leave, but hopes to be back

ingham informed me that Lieutincal School, Cilcutta, had been

appointed as Honorary Secretary-Treasurer, apparently for Bengal

Indo-China -- Dr Guerin went on leave on the 1st of November last, whereas Dr Montel had siready left for France two months previously,

Dr Guerm is quite willing to take up office again and I therefore promised bim to submit his name for re nomination. If the Council members for Indo China think it necessary, a deputy Honorary Local Secretary might be nominated for the time of Dr Guerm subsence.

Netherlands Indies - Dr J J van Lonkhuijzen Head D E I, Health Service, went on leave for a year but is returning next January

Sarawak -- Dr L M Marjornbanks has left the country according to information received from the post officials

Several Secretaines (and Vice Presidents) have not answered to my letter and circulars, so that it is uncertain whether they wish to hold office any longer. From one country these office bearers have not written since 1922, nor paid their subscription, of which facts I have informed the only member in their country, niking him to take up the office of Honorary Local Secretary for the time being, and to distribute the circulars A and B is the seventh Congress which he was kind compits to the

Ren hers

To my circular letter of the 5th of July 1927 to the members of the Berner Committee, in which I saked for further reports in onaswers have been received and I therefore, am afraid that the interest in this problem is slacking unless, which is another possibility, the beri hert problem has ceased to be a problem because of the better nutrition of the native population of the Eastern countries, like in the D E Indies, where this illness is noted less and less frequently

Constitution and By laws

In case the Constitution and By laws of the Association are going to be amended again, I would propose to let fall into disting the provision in article 9 of the Constitution that a proposed amendment shall not be seted on until the biennial session next following that at which it was introduced, as I noticed that it was resolved several times already to let an amendment take immediate effect, which is quite natural because no amendment will be proposed and adopted without sufficient motive

I further would that immediately

one year to more)

ntific papers This well for the Secre be held, as for my port of the Council

and business was published latest and separate from the Transactions of the Congress

Several times I have been asked for copies of the proceedings of the 1st Congress of our Association, with a view on which I have had thus reprinted and distributed among the members with the result that there are no more sparse copies left. Where there are some members who like to get them, it can be reprinted once more

Seventh Congress

To the officers of our Association for British India, organizing the Congress was given such information as asked for and further what was thought expedient

The circulars A and B, which I received from Leutenaut Colonel J Cununigham have been forwarded directly to those members of whom the addresses were known at my office of which fact I informed the Honorary Local Secretures concerned, sending them a list of these addresses I further asked the Honorary Local Secretaries to let Lautenant Colonel Cunningham and my office have a list of addresses of the gentlemen and In titutes to which they are going to send the circulars I had to spare for them. As not every S Critary compiled with the latter request a word of thanks is here not muphaced to those who were so had to be willing to give their co-operation.

Co operation with League of Nations

Colonel J D Graham I VS Honorary Local Secretary for British India Simla informed me on the 7th of August 1927 that it had been suggested to have a joint meeting with the Lapert Plague Commission of the Advisory Council of the League of Nations Health Organization Eastern Bureau Singapore, which was constituted with the idea of meeting in Calcutta at the time of our seventh Congress 1 thought to set well on behalf of our Association by answeing that I was of opinion that the proposed arrings ment should be looked upon as being very desirable in case the Leagu of Nations appeared to be willing to co operate.

Finances

reas only une _20

ton. Considering that 5 000 yeas (about 5 100 galders) have been contributed out of the funds of the Association towards the expenses involved in the Transactions of the sixth Congress and that the expenses of my office have been 1 3027 99 in two years (1925 27) furnically the Association 15 m good condition thanks to the steadily more sung number of members

Rules of Procedure for Scientific Sessions

1 Rapporteur - A 'Rapporteur' has been appointed for each subject He will assist the Churmun in any way required and will record the proceedings of the section.

- 2 Announcements from the Chair The Chairman will kindly make any amouncements required by the Congress management before beginning the daily programme or will request the 'Rapporten' to do so for him
- 3 Copies of papers for reading—In order to expedite the scientific business of the sections it is requested that all papers dealing with the same aspect of each subject be read together before any discussion on them is allowed. Re iteration will thus be prevented and time saved.

The same rule can be observed with advantage in the special discussions

- 4 Papers of authors who are not present—A list of papers, the authors of which are not present at the Congress, will be supplied to the Chairman who may use his discretion as to whether they may be 'taken as read' if time is short.
- 5 Papers not read for want of time It is absolutely essential that the scientific programme in each section be adhered to rigidly Papers which have not been read for want of time will be dealt with in other meeting rooms as laid down in the programme
- 6 Papers received late —Papers which have been received too late for in clusion in the programme will be read if there is time after the earlier papers on the same subject have been read. A list of these papers with authors' names will be supplied to the Chairman and 'Rapporteur'
- 7 Ducussions —Speakers other than those reading listed papers should be requested when they have finished speaking to record their remarks in writing on paper slips which will be supplied for the purpose, so that their remarks can be recorded in the Transactions The 'Rapporteur' should obtain the speakers name immediately after he has spoken and see that his written statement is handed in to him (at the conclusion of the sitting)

the can asked that the time limit
the By laws be
for the delivery
of speak more
A bell will be
tes in the first

9 Lanterns for illustrat to papers — A mague lantern and an operator are provided for each sect or for the benefit of members who have illustrated their papers by mean of lantern shdes

Voluntary helpers to darken rooms —A group of voluntary helpers is also attached to each meeting room who will be posted at each window and door, so that at a sign from the Chairman or 'Rapporteur' the room can be rapidly darkened and lightened again

sect drawneral record of the proceedings of each order of the speakers etc, should be he section proceed. This report should a section proceed. This report should be a section groces and a section groces are least report should be falled for the section and should be signed.

by the 'Rapporteur The recorded remarks of each speaker (other than the listed papers) should be attached to it in order of speaking

11 Staff—1 clerk and a chaprass are attached to each meeting room to assist in the distribution and collection of the slips for recording the remarks of the sreakers.

Official delegates to seventh Congress from China

2nd Meeting of Council Held in Committee Room No. 1 of the Congress Buildings at 9 a.m., Thursday, December 8th, 1927.

Agenda.

- 1 Minutes of-
 - (a) General Meeting of Delegates held on December 4th, 1927(b) First Meeting of Council held on December 4th, 1927
- 2 Announcements from the Chair
- 3 Report of Financial Committee
- 4 Venue of next Congress
- 5 Consideration of Dr Wellington's proposal with reference to intervals between Congresses
- 6 Any other husiness

Minutes

- 1 The minutes of (a) General Meeting of Delegates held on December 4th, 1927 (b) 1718 Meeting of Council held on December 4th, 1927, were taken as read
- 2 Amouncements from the Chair —Further telegrams of good wishes received from the various well wishes were placed before the Council The President drew special attention to that received from the Minister of Fdication in Egypt, announcing a Medical Congress at Cairo for which invitations would soon be forwarded Dr. Heiser pointed out that he was in a position to inform the Council that special arrangements were being made for a very big Congress. The General Organizing Secretary was authorized to answer the telegrams in suitable words.
- 3 Report of Financial Committee—Report of the Financial Sub Committee was presented by Dr Hoops the Chairman of the Sub-Committee The

latter subject

In this connection a resolution was moved by Dr. Heiser and seconded by Colonel Damrong that It is the recommendation of this Council that at future Congresses the hotel and towing expenses of delegates should be borne either by the delegates themselves or by their Gorcaments and not by the tocerument of the contril usuning the intrilation. This proposal was carried unanimously

4. Venue of next Congress — The President referred to a telegram received from Honolulu and a letter from the Official Delegates from China and the proposal made by Major Hitchens at the last meeting. He also stated at the meeting that His Serene Highness Prince Vallabbalara had cabled his Govern

ment asking that an invitation to the Congress be issued. An animated discussion took place on these proposals. The President invited the opinion of the Council in favour of the various invitations with the following results:

In favour of Honolutu Ch na S am (I inv tat on reced)				rd)			25 15		
"		•	1 41	4 4L	-	 . '		~ ^head rper	
								five eld	

Colonel Mackie pointed out that only official Government invitations before the meeting could be considered. Der Heiser pointed out that some such committee about he left to act for the Council Dr. Deggeller was against the formation of any such committee. As an amendment to the motion it was proposed by Dr. Wu Lien Teh an I seconded by Major Stott that the next meeting be held in Pelang in 1930 and if this falls through a committee be appointed to decade the venue of the next Congress Major Hitchens considered this amendment unnecessary. The amendment was both by 18 to 17 votes. The Chair then appointed a committee of five members Dr. Wu Lien Teh Major Hitchens. Dr. Lonkbuijzen. Colonel. Christophers and Professor Hata.

J. Consuleration of Dr. Wellington a proposal with reference to interests between Congresses—The Chairman proposed that stem No. 56 of the Agenda be taken for convenience before term No. 4. Dr. Wellington stated that his Government considered that the meetings of the Congress were too frequent and 1 proposed that the Congress should be hell every three years instead of evert two years. Longer intervals might possibly destroy the continuity of spirit for this reason every forci or five years were objectionable.

Dr Deggeller pointed out that this would involve a change in the rules about sul scription and proposed that £1 annual subscription be substituted for the present law laying down a biennial subscription of £2 Colonel Graham was in sympathy with Dr. Deggeller's proposal. I discussion then took place on the question of the payment of subscription in which Dr Deggeller Major General Tate Dr Wellington Dr Hoops and Major Stott took part Dr Deggeller suggested an annual subscription of £1 Dr Hoops suggested 13 instead of 12 trienmally Major Stott brought forward a resolution secon led by Dr Hoops that a subscription of £1 be paid in one lump sum This resolution was carried by 12 to 11 votes. In view of this resolution a further resolution proposed by Dr Wellington and seconded by Colonel Graham was put forward that this council recommends to the general meeting that the Congress be held treennully instead of beennully and article 9 \o 1 of the constitution be suspended so that it can take effect immediately Colonel James asked whether an opportunity to discuss this would be given at the General Meeting to which the Presi lent give his assent

6 Any oil er business Beri l'eri Committee

Dr. Heiser enquired whether any report had been received from the Berilen Committee – Dr. Higgeller stated that he had received no report – The General Organizing Secretary informed the Council that a report had just been handed in from the Ben ben Committee of the Philipp ne Islands

 - 5 From Dr Jayara Singh, Povaram, Godavery --
 - 'Regret inability attending Wish success Welcome foreign delegates members and return with happiness'
 - 6 From the Institute of Tropical Hygiene Amsterdam -
 - 'Hearty wishes for the successful Seventh Congress Institute Tropical Hygiene, Amsterdam, Schuffner Snijders Swellengrebel Van Loghem'
 - 7 From the Minister of Education, Egypt -
 - On the occasion of your biennal Congress now meeting in Calcutta
 the President of the Organization Committee of the International Congress of Tropical Medicine to be held in Cairo on
 the 15th December, 1923, wishes you and all members every
 success and hopes that it will be possible for many of them to
 attend the Cairo Congress next year for which invitations will
 soon be forwarded Blinister of Education, Egypt, Aly El
 Chamsy.*

The following letter was received from Dr E C Faust, Councillor and Charaman of the China Branch of the American Society of Parasitologists, Peking —

Greetings and all best wishes are extended to the Congress by the American Society of Parasitologists. May the members of the Congress continue their tradition and high standards of reserven in Tropical Medicane and the application of such investigations to the prevention of directs, so that men of all rares may be enabled to live happier and more useful lives.

3rd Meeting of Council Held in Committee Room No. 1, Congress Buildings at 9 a.m., December 10th, 1927.

Agenda.

- 1 To read minutes of previous meeting
- 2 To consider the appointment of the Association Officials for the various countries for the triennial period 1927 30
- 3 To consider agenda for presentation to the General Business Meeting
- 4 Any other husiness
- 5 The question of certificates to Commercial Exhibitors.

Montes.

1 The minutes of previous meeting —The minutes of the previous meeting were read in detail

Items Nos 1, 2, 3 and 5 were accepted.

Item No 4 The letter to the General Organizing Secretary from the Chinese delegation dated the 8th December, 1927 was read to the Council at the request of Dr. Wu Lean Teh. Dr. Wu Lean Teh. Dr. Wu Lean Teh. Dr. Wu Lean Teh. Was of opinion that the resolution proposed by Major Hitchens and seconded by Major Harper Nelson and the amendment proposed by hum, and seconded by Major Stott.

er and seconder,

The President pointed out that the Council had always received a signed document from the Government concerned. This had not been received by the Council on the present occasion.

In this connection Dr Heiser pointed out that as one of the original members of the Association he was familiar with the methods of procedure in these matters. The Council had never accepted an invitation without direct documentary evidence from the Government concerned He quoted the case of Colonel Mackie in Tokyo who had to cable for official instructions from the Indian Government before the Council would accept the invitation . Dr Hoops had also presented a signed statement from his Government at Batavia, the Japanese delegation had also presented direct documentary evidence He asked Dr Wu Lien Teh to withdraw his letter pointing out that every one was aware of China's desire to invite the next Congress to meet in China and that the Committee would view the invitation sympathetically when officially received Dr Wu Lien Teh stated that the document ary evidence was in his possession and would have been produced had it been asked for There was apparently a musunderstanding that the invitation had been a personal one. If the Conference accepted this explanation he would withdraw his letter and leave the matter open. This was agreed to and the minutes were passed unammou ly

2 To consider the appointment of the countries for the transmal period 192-33

Resolutions of the Expert Plague Committee of League of Nations Health Organization in conjunction with the F. E. A. T. M.

The meetings on the section in Plague, in accordance with previous arrangement, were held as Jont Sessions of the Expert Plague Committee of the Health Organization of the League of Nations and the F E A T M.

After the sessions on the 6th and 7th December, 1927, at which papers

The Joint Committee met on the 8th and 9th December, 1927 under the Chairmanship of Dr. Madsen and have embedded in the attached resolutions their recommendations as in the more important lines of further investigation which they consider advantage in regard to placue.

The following investigations are considered of particular importance by the Expert Plague Committee -

A BURONIC PLACEE

- 1 Further investigations into the methods of destruction of mts and fleas
- 2 Investigation into the comparative epidemiological role of the various species of fleas in plague transmission in selected areas of India, as being the most heavily infected country, the species of fleas concerned and their viability under natural conditions
- 3 Survey of plague in wild rodents of Northern Asia (Transhaikalia, Manchuria and other Chinese Provinces) by an international mission, provided such mission receives substantial support from the countries concerned.
- 4 Investigation on the part played by grain and cotton in the dissemination of plague and measures to prevent this appeal (disinfestation)
- 5 Investigation of the conditions under which plague is carried over from one season of incidence to another (problem of its recrudescence)
- 6 Investigation on the relative importance of rodents other than rats in the transmission of plugue in various countries
- 7 Investigation of rat and Sea conditions in ports (shore, lighters, ships), the ship fauna being investigated both in ports and during the voyages, in castern and western areas. This information should be collected by the Singapore Bureau for providing information applicable to quirantine measures.
 - 8 Prophylaxis and therapeutics-
 - (a) speedy preparation of anti-plague vaccine
 - (b) possibility of reducing local reaction to anti-plague vaccine
 - (c) possibility of producing a plague antitoxic serum
 - (d) further studies on anti-plague 1 acteriophage and its practical applications
 - (e) chemotheraps of plague

- 2 Amendments to the Constitution The necessary amendments to t. stitution and by laws necessated by these resolutions were put meeting and carried unanimously (See page 76)
- 3 Resolutions passed by Scientific Sciences (a) The resolutions proby the joint session of the Expert Plague Committee of the Health ization of the League of Nations and the Far Eastern Association Tropical Medicine were read to the meeting and carried unanumously pages 71 and 72)
- (b) The resolut ons drawn up by Scientific Section No 4 of F E A T M Seventh Congress on Malaria were read to the meetin carried unaumously (See page 75)
- 4 I enue of next Congress The names of the Committee appoint the Chair under resolution 4 above were placed before the meeting and a unanimously (See pages 60 and 61)
- 5 Any other business The list of Vice-Presidents and Local Secraccepted by the Council was put to the Meeting and accepted by them page 66 et seq }

The appointment of Dr Deggeller as the General Secretary Trafor the ensuing three years was also accepted unanimously

RESOLUTIONS ON MALARIA

The Malaria Section of the Seventh Congress of the Far Eastern Association of Tropical Medicine are aware of many instances of a great increase in the incidence of malaria caused by the facilities given to mosquito reproduction by engineering works either during construction or afterwards due to the different conditions brought about This Congress is of the opinion that plans for railways, canals, harbours and all similar engineering works help to affect the conditions producing malaria schoold he submitted to the proper public health authorities and their sanitary engineers before being sanctioned by Governments

Carried with one dissentient

II.

As it has been represented that differences of onmon regarding the best match to of controlling malaria sometimes cause doubt in the public mind and so may hamper the progress of anti malarial work, this Congress takes the present opportunity to emphasize the fact that there is no single method of malaria control applicable to all conditions and all countries

Nevertheless they consider that for towns mines, plantations, largo public works and similar aggregations of people, the control of the birecling-places of the malarit cerrying species of mosquito is a method which should be employed whatever other anti-malarial measures are put into force. Whenever possible this control should be effected by permanent works which elimit natio entirely the sources of mosquito breeding.

For whe mind areas specially those with south postry stricken populations the first step in the control of malanar adequate research to that the conditions present may be swith mind and the best methods of control under the purticular circumstances secretained as a result of such research. Welhold of producing may here be of great variety and include draining flooding jungle cleaning jungle preservation boundation the promotion of agriculture, improvement of housing and the general economic condition clusarion, etc. of the people. The systemate killing of infected adult mosquitoes, screening the use of anti-malanal drugs and a host of special methods bave each also to be considered in their proper application.

The Congress degrees to stress the need not only of thoroughly trained malaria research efficers but of expert malarial engineers in whichever type of malaria revention is at stake

ADDRESSES AT THE GENERAL BUSINESS MEETING OF THE TIR CONGRESS, F. E. A. T. M.

The Hon'ble Sir Muhammad Habibullah's speech.

General Symons, Your Serene Highness and Delegates to the 7th Congress of the Far Lastern Association of Tropical Medicine

I must, in the first place, express my regret that I was unable to be present at the inaugural meeting of the Congress Pressure of unportant business at Delhi robbed me of the opportunity of joining in the first welcome. I avail myself of my presence in your midst to day to either the tentiments expressed in the message of this Excellency the Viceory, which was conveyed to you by His Excellency Sir Bisnley Jackson, and to express the hope that your stay in

tour to those who must return from Calcutta to their others homes, I will God speed. To all of you, whether delegates from shroad or from the vanous parts of India I express the thanks of the Government of India for the contribution which you have made by your meetings and discussions to the promotion of medical science, and of friendly understanding between men engaged on a common beneficent task.

Thought

the medical and nposes on me an l achievement of

men engaged in the fields of medical administration and accorded but there is also a personal side to my interest. Throughout the active portion of my life, I have been intimately concerned with the administration of medical rebef and sanitation. First, as the civic head of the town of my adoption in the Madras Presidency, then as the principal civic executive of the metropola of that Presidency, and subsequently in succession as a member of the Provincial and Imperial Governments, I have had to concern myself with measures designed to combat disease and allernate human suffering. This long experience and association have made administration of the subject, which is your life's work, more than just a dry duty to me.

I shall not presume, Ladtes and Gentlemen, to assess the technical value for work which you have accomplished during your present session in Calcutta. The jist of the questions which you have discussed is long, their scientific aspect to a non scientist like me an esoteric mystery, their sallystic assumant of your proceedings and listening to your, testlutions, I find that "gird discasses, such as plague, cholera, malaria and kala sara, which from time to turne ravage this country, have been claiming your attention I am confident that the light, which investigators from abroad attending this Congress have shed on the problems connected with these forms of human

affliction, will prove of the utmost value to our own workers. I also trust that an account of our methods, and first hand experience, however slicht, of the procedure, technique and scope of our inquiries in the domain of tropted diseases, will prove of some help to them. For we have, also I only too many

benefit of humanity, and the advancement of science. The names of Ross and Rogers and Cragg—I must spare those present here to-day the blushes which are the physical reaction of time workers to prasse—are not only worthy of my tribute but are guarantee of the elaim which I have made on behalf of the noble band of the arrants of methed science in India. Nor must I out mention of that great Indian, whose researches in the field of plant line of pend up fresh and limitless avenues of speculation, of inquiry and practical achievement to doctors no less than to hiologists. For is not

degree of confidence that among the torch bearers who have helped to illumine the path, the name of Sir Jagadish Bose will rank high

And now Ludies and Gentlemen lest I seem sudts of prolix, though parriet ic, panerying let me change the theme. I have spoken so far on the aspect of your work which belongs to part (c) of Article 2 of the objects of the Asso-uation viz. the development and diffusion of scientific knowledge I shall now speak of another aspect of equal importance—the promotion of friendly intercourse between scientific men. To my mind Ladies and Gentlemen, that is as much a necessity of the future as its beginning is one of the ausnicious and distinctive features of our _Oth Cantury civilization To the Far Fastern Association of Tropical Medicine belongs the credit of first making such intercourse a reality. The League of Nations to whose initiative in the sphere of international co-operation the world owes so much and the Rock feller Foundation whose truly catholic generous, has rendered immense service to the progress of medical science, have stimulated and accelerated its beneficent development. We in India are willing and ready to play our part in the scheme of co-operation by intercourse. That was one of the motives which led the Government of India to decide to myste the Association to hold its 7th Session on Indian soil In the very near luture we hope to hold an interchange of health officers under the auspices of the League in this country. Next year, we tru t the League may find it possible to send their Commission of malarial experts to India 1 need not remind the Congress that we have been participants in past gatherings of the Far Lastern Association of Tropical It must also be known that India is a member of the International Health Office in Laris and that at tresent her Lublic Health Commissioner has a seat on the lealth committee of the League of Nations and on the advisory council of the Bureau of Prademiology at Singapore. There are a few concrete instances of our desire for co-operation by association and inter course. If more of portunities for co-of cratic n ares. I am sure India will not be slow to respond to the eall of service

But I have another motive in dwelling on our readiness for intercourse. There is an impression in some quarters that as a country where certain diseases are endemic, we are doing little to combat them, or to ensure that infection does not spread from our shores to other lands. You have been in Calcutta during an epidemic of cholera which, for the time of the year, was considered by our experts to be serious. Some of you may have seen what is being done to cope with the outbreak. The fact that it has been rapidly knought under control is proof of the efficiency of the health organization of this great city. Lt Col. Russell, who comes from my old Presidency, has given you some idea of what is being done in Madras. Those of you who undertake any of the tours that h

in other parts of

hut to support we have nothin

sitable or possible has been reached. In a country greater in size than the whole of Europe without Russia, and with a population of over three bunded millions, even a small measure of progress represents endeavous which would be equal to the achievement of perfection elsewhere. I confess that a great deal remains to be done and we need all the light and inspiration that the example of other countries can give us. But we plead not guilty to any suggestion that endeavour has not been quickened by the presence of danger or the breath of science.

eside was dical

Service won fresh laurels in other heids, has min, 1 am 1, am 1 and 1 and possible to agree to serve on the committee which will include two distinguished workers with recent Indian experience, viz, Dr. Row and Col. Christophers, F.R.S. The Government of India trust that their labours may impart to metheal research in India fresh impetus and definiteness of direction.

Ladies and Gentlemen, I must not detain you too long You have worked hard and still have a busy round of engagements to go through It would be inconsiderate of me to weary you with my discourse I shall offer one word of explanation for the prominence which I have given to research in my enaris. It is because I feel that me held of medical research, international co operation can, at this stage, be most fruitful. And gatherings like the

understandings of method and objective dispelled Men separate with greater clarity of vision and strength of purpose to renew their taks. May the 7th Congress of your Association conclude its labours in the consciousness of much good accomplished and with faith renewed

Professor Shiga's speech.

Hon'ble Minister, Mr. Chairman, I adies and Gentlemen

I deem it a great honour and privilege to express our sincere thanks to you

City

Excellency the Viceroy our Association was enabled to meet here in the beautiful city of this great Empire in the largest scale we ever had. We are very grateful to the special mission of the Honourable Himster of Education, for which I express most heartful thanks. Special thanks are due to the Local Committee of our Association, who carried out the preparation and execution of this 7th Congress with utmost care and effort, by which the smooth course and fruitful results of the present Congress were situated, for which I congruitate most enecesy all the Local Committees

Expecting the re-union after 3 years, I thank you all

The Honble Dr. A. L. Hoops' speech

I rue on behalf of the foreign delegates their wives and families to second what our finend Dr. Shiga has said and to thank the Government of India, the Governments of Bengal and of other provinces of India, Major General Symons our President and the Honble Sr. Muhammad Habbillish and all those who had made this Congress a success, for no doubt the Congress has been a success.

At the let conference in Tokyo two years ago our distinguished President Baron Kifasato said "Dicease knoss no boundaires" and General Symons has stressed the same point, namely the unicernational character of disease. In that connection the new international convention of Paris in 1926 is of the greatest importance and so is the work of the health committee of the League of Nations whose President Dr. Midsen, is with us at this Congress. We know what the League of Astiens is doing to combut diseases in the world, and we were privileged in Singapore to fixe a seat on the Bureau of Epidemiological Sindapore in the Far Fut. A meeting of the Advisory Council of this Bureau will take place in Delhi during Giristimas and Col Grahm will fixed over it. We have about the work of the Rockeldert Foundation, whose representative Dr. Heiser is with us to day for the prevention of divases. I

Service

In conclusion I would again renew the thanks of the foreign delegates to the Government of India and to other officers for the success of the F E &. T.M. Congress and the splendid hospitality that we have received at your hands

Major A. Parker Hitchen's speech.

This 7th Congress of the F E A T M has added further evidence to the already well known fact that communicable disease recognizes no political houndaries. The fundamental problems in disease control here in India are, we find, practically identical with our problems in the Philippine Islands and with our problems in the United States.

One impression I have gained here is that, as with is there are two really fundamental problems—and only two One is how best to do public besith work when more or less adequate funda are available and the other, and more important, is how to get public health work done with no money appropriated by Government for specific saintary measures

Anyhody can spend money hut it is not every one who can invest money as has been done in Malaya in its management of malans. Any country is fortunate which can employ such a group as that which has solved so many of the problems of kala are here in India. Any country is fortunate which can attract research workers such as those we have met here from the various institutions of India. We have always known these men through their work and now that we have met them face to face we shall take a keenir interest in the things that interest them. To provide research men and give them the facilities for their work depends directly upon adequate funds. That country also will be fortunate which has established in the public schools, especially in the lame.

habits

The great mass of our populations meintain their communicable diseases through the exercise of century old bad santary habits. Before we shall ever come near attaining the goal towards which we are strong we must

in the earlier years of life and they are fixed by practice not by learning ex-

Our functions as students of disease and as administrators of public health and as healers of the suck all bave their important places but the inc dence of communicable disease will undergo no satisfactory reduction until the liabits of the people undergo specific changes. The habits which tend to favour the transmission of disease must be changed to habits which tend to favour the transmission. From the standpoint of ultimate disease control it is obvious that with or without funds appropriated for specific health purposes our work can go on and where we have the intelligent co-operation of our Bureau of Education we can do efficient disease prevention work. We can under these circumstances, actually make bricks without straw.

Medicine, Dermatology and Pathology December 5th 11 a m to 1 pm and 2 to 4 pm

Chairman - Major H Stott I.M S (L P B India)

Papporteur—Dr. J. M. Henderson (Bengal B. India). At the morning session the perco-diags were opened by It Col. F. A. I. Barnardo I. W.S. (Bengal B. India) who read a paper on the importance of mixed infections in the Topics. In the discussion which crusial practice Let Col. C. A. Sprawson (U. F. B. India) then followed with a most info matrice paper on D seemanted Sciences in India. This provoked a most interesting discussion various members quositioning the content on of the spacers that the discussion various members quositioning the content of the spacers that the discussion is rate in Indians. Waper Labermadie (Cloudscherty, French India) then contributed two short papers and the morning session was brought to a close by Dr. U. P. Barus (Bengal B. India) call chiening contribution on the vope of Dagitalis in the Trop call Heart of [Bengal].

At the afternoon session papers were read by Dr. J. W. Tomb (B har and Onics. B. Ind.a) and I v. Dr. Rus. Bahwdur. Ganguiy. (B. ngal. B. India) on various aspects of the rs. A short discussion followed. Dr. Ganguir is a japer. In the absence of the author a summary of Dr. S. K. Mukhorji. s. (Bengal. B. Inl.) paper on the Fullemiology of Infantic Bildary C. ribosis of the Laver was given by the. Rapporteur and the proceedings terminated.

Surgery.

DECEMBER 5TH 11 AM TO 1 PM

Chairman — Major General G Tate, V H S., IMS (Bengal IIndia)

Rapporteur -- Lt Col E W C Bradfield, OBE IMS (Madras B Indus)

The Surgical Section opened with a paper by Major General Hooton I MS (Bomhay, B India) on the 'Choice of Operation for Vesical Calculus'. The writer emphasized the advantages of litholapary and pointed out that in India the results had been so satisfactory that the operation had been considered thoroughly established for many years past as the procedure of election. For a considerable period, however, there appeared to have been a gradual tendency to substitute surpa pube litholomy for litholapaxy in Europe and America which had been reflected in recent publications and teachings. He still advocated litholapaxy as the operation of choice in all but exceptional cases

The subject was fully discussed by those present Most of the speakers agreeing with the contentions laid down by General Hooton. It was pointed out however that supra pubic hithotomy would be carried out by surgeons who had little opportunity to practise the operations of htholopaxy

Two papers on Filansis followed one hy Lt Col Sir Frank, P Connor IMS (Bengal B India) the other by Lt Col K K Chattern (Bengal B India) The subsequent discussion served to emphasize the large gaps in our knowledge of the at ology and pathology of this important disease

E '' ia) During the discussion on this paper read by Lt Col this During the discussion on State B Indiv) gave his experiment the overwhelming preponderance of cases in certain areas and groung as n possible explanation the presence of constipation phthiss and a staple diet of tapicos instead of rice. From this he argued that diodenal uleer was usually a defection of season.

The section concluded its sittings with a paper on the 'Surgical complications of Chronic and Latent Amedonass' by Col Chatteri and the description of an operation for 'The Relief and cure of Endemo Ascrtes' by Captain Dagam (U P B India)

Десемвек 6тн 10 ам то 1 Р м

Charman -Dr W B A Moore (Churs)

Rapporteur -- Dr J W Henderson (Bengal B India)

Lt. Col F A F Barnardo IMS (Bengal B India) opened the proceedings with a uaper on Enter c Fever The speaker emphasized the necessity for early accurate diagnosis before secondary infections obscured the picture The gravity of secondary atreptococcal infection was stressed and the need for anticipating this complication by adequate dosage of anti-streptococcie and the state of t cussion

PB ob # 1.01 Rule of

Gold Salts in the treatment of Pulmonary Tuberculosis and 'Seasonal Variations in Body weight in Fulmonary Tuberculosi were then submitted and a short discussion followed each. The morning session ended with an interesting paper by Dr Gupta (Bengal B India) on Dermatology in the Tropics

2 то 4 г м

Chairman -Dr > C Prommas (Siam)

Papporteur - Dr J M Henderson (Bengal B India)

The afternoon session met under the Chairmanship of Dr Prommas (Sism) and was devoted entirely to a discussion on diabetes particularly with reference to Pastern conditions The subject was dealt with both from the bio chemical and the clinical sides and an interesting interchange of views reaulted

Oohthalmology

December 6th IO am to 1 Pm

Chairman -Col C R Bakhle IMS (Puniab B India)

Papporteur -Major F W OG Kirwan (Bengal B In ha) Two papers were read on Glancoma by Col Coppinger (Bengal B

In ha) and Dr Mukerice (Bengal B India) Discussions took place on the causation and treatment of this dis ase which is common in Beneal and in the recent outbreak of equilemic drops; a very large number of cases occur red The authors pointed out the importance of early operative treatment to prevent a considerable loss of vision or even total I in liness

A valuable raper on Ocular Tension by Major Clive Newcomb and Cart Version (Ma Iras B India) was read by the former The importance of hyper tonic salue given intravenously was pointed out as a means of treatment in

glaucoma to lower tension in the eves

A paper on the Ccular Complications in Leptosy was read by Major Kirnar (Bengal B India) The author pointed out the importance of early treatment to prevent loss of vision. The article was illustrated by coloured plates of eve lesions as seen in the Leper Asslum Gol ra Cilcutta

A paper on Mooren's Ulcer an I another on the Ocular Lin lings in Amorb o

Dysentery were read by Dr. Bhaduri (Bengal B India)

Cynecology and Diseases of Pregnancy

DICEMBER 6TH 2 TO 4 PM

Chairman -Dr Kedaroath Das (Bengal B India) Papporteur - Dr M I Balfour (Bombay, B India)

Dr Margaret I Ballour (Bomlas B India) read a paper on Diseases of Pregnancy in India The result of an all India investigation showed that much of the maternal mortality in child birth was due to disease during pregnancy. The most important of these diseases are anismia and osteomalises which are common in India but very rare in Europe. The climical symptoms and hlood changes of anismia of pregnancy were dealt with and the libelhood that the disease was due to an intestinal toxin diseased. Dr. (Miss.) M. M. Melita (Bombay, B. India) read a paper by herself and Dr. A. Emanuelov on the Pathology of the Above Di-sease showing the lines on which the investigation is proceeding at the Haffinne Institute, Bombay. Dr. Agues Scott (B. India) read a paper on Osteomalacia describing an investigation undertales by herself in India 12 years previously, and giving the results of some more recene investigations in China and Europe. Dr. Scott described the great danger of this disease in child linth, and mentioned the remarkable fact that it was largely confined to certain communities and certain parts of India.

The discussion which followed included all 3 papers and was taken part in hy Col Green Armytage (Bengal, B India), Major Flening Gow (Bengal, B India), Dr Bo Mulerjee (Bengal, B India), Dr Goheen (Vengurla, B India), Dr Roy (Bengal, B India), Dr Goheen (Vengurla, B India), Dr Roy (Bengal, B India) and others Dr Balfour and Dr Scott rephed and the Charman made some concluding remarks

DECEMBER STH, 10 A M. TO 1 P M

On Thursday morning a discussion on vesico-vaginal fistula was opened by Dr. Ida Scudder (Madras, B. India) Many speakers took part

Dr Kedarnath Das (Bengal, B India) read an interesting paper on the History of Obstetric Operations and described various methods used by the Hindu doctors from 1600 B C onwards. He further showed the gradual development of modern obstetries up to Chamberlen's time

Mental Hygiene and Psychiatry.

DECEMBER STH, 10 A M TO 1 P M

Chairman — Dr. B. M. Usman (Hyderabad State, B. India) Rapporteur — Lt. Col. Owen Berkeley Hill, IMS (Bihar and Orissa, B.

Col Berkeley Hill (Bihar and Orissa, B India) read a paper entitled Mental Hygene of Europeans in Tropics' He mentioned that mental

n tropical countries about nervous and mental disorders. There is certainly a tendency among Europeans in the tropics to suffer from an almost specific neurosis and from its symptomatology it to be a form of 'auxiety neurosis' So far no nation except the French had made any attempt to formulate a conception of mental hygene as a

wanch of general tropical hygiene Col Berkeley Hill called attention to the leplorable condition in India in respect to the study of mental and nervous issorders. He said he was glad to note that the Province of Madras had at est realized the necessity for radical reforms in this aspect of medical education.

Capt Dhunjbhoy (Bihar and Orssa, B. India) read a paper on the ype of Mental Disorder produced by Canachs Ind on taken either as Bhang in Charas. He indicated the percentage of Indians admitted into the Mental Geoptial at Ranchi suffering from the effects of Cannabis Indica as 35 per cent of the total number of admissions. Capt Dhunjbhoy showed specimens of Cannabis ind on and a collection of pipes employed usually for its consumption.

Dr S Funaoka (Japan) displayed some interesting specimens to illustrate a method he had devised for staining the central nervous system for purposes of studying morbid changes therein

Radiology.

DECEMBER STH, 2 TO 4 PM

Chairman — Dr E Jourdran (French Indo China)
Rapporteur — Lt Col J A Shorten, IMS (Bengal, B Inida)

T-014 M 2771

(Benga, B India) were among those who contributed to the discussion

Dr Jourd'an then read his paper on 'Utilite des Examens Radioscopiques répétés au cours des Affections Cardio-vasculaires des Béri bériques'. This was illustrated by diagrams. Dr Galstaun in the course of his remarks con-

examinations

Deutistry.

DECEMBER 5TH, 11 AM TO 1 PM

Chairman -- Mr J E Gill, LDS (Bengal, B India)
Rapporteur -- Mr J E Gill LDS (Bengal B India)

Dr Ahmed (Bengal B India) read a paper on 'The hibit of Panchewing' and Dr Modi (Bombay, B India) a paper on 'Some observations on Pan chewing—the use of Baval stick, as a tooth brush and tooth pastes as a Dentifire' These were followed by a paper on 'Oral Sepsis' by Mr H A Tay or, LDS (Edu.),

Interesting discussions followed each paper.

SECTION II.

State Medicine and Hygiene. December 7th, 10 a m to 1 p m

Chairman -Dr A L Hoops (Straits Settlements)
Rapporteur - Major G G Jolly, I MS (Burma, B India)

In the forenoon Col Graham, Public Health Commess one; with the Gorea ment of India opened a discussion on 'Quarantine,' outlined the history of the subject and described the activities of the vanous international organizations including the 'League of Nations' and the 'Office International' Rigiene Publique' He referred to the several International Convections dealing with quarantine and discussed the provisions of the Paris Convection of 1926 and its implications. He suggested a number of points requiring an answer affecting the role of the domesticated rat in regard to plage Dr J Borland MoVail (Bengal, B India) described in graphic detail the Qurantine Conditions prevaling in the Port of Calcutta

Dr Crow (Bengal, B Indua) dealt with the question of the De-rating of Ships and showed how systematized test trapping may serve as an industion of the need for funipation. After these papers had been read, a long and highly interesting discussion took place in which the following gentlemen participated—

Lt Col Busset (Burma, B India) Dr Fabian Hurst (Ceylon) Dr Victor G Heiser (Rockefeller Foundation), Col Houston (Bombav, B India) Viajor Jolly (Burma, B India), Dr Hoops (Straits Settlements)

After Dr McVeil and Col Graham had replied the session closed

2 TO 4 PM

Chairman -H S H Prince Vallabhakara (Siam)

Rapporleur - Major G G Jolly, IMS (Burma, B India)

In the sitemoon Lt Col Russell, IMS (Madras B Jadas) read a paper on Cho'era Bihvacena and Anti-cholera Vacene in which he showed the results of his field tests in the Madras Preadeep, which showed that both anti-cholera vacene and cholera bihvacen afford an important measure of

DECEMBER STH, 10 AM TO 1 PM

Chairman -Dr Wii Lien Teh (North China)

Papporteur - Major G G Jolly, IMS (Burma, B India)

Bangalore agreed with those of Cof Stewart

A paper followed by Lt Col Russell (Madras B India) on Population and Public Health in India which raised many fundamental issues and suggest of questions to which the answers are very difficult D in Tomb (Bhiar and Orisa B India) Col Gill (Panjab B India) and Col Bisset (Burma B India) took part in a discussion which appeared likely to become general but was unfortunately closed by the chair on account of shortage of time

2 TO 4 PM

Clairman - Dr C R Eskey (United States of America)

Rapporteur -- Major G G Jolly, I MS (Burma B India)

The following papers were read at the afternoon session --

Incidence of Pulmonary Tuberculous in Multan City by Dr Gian Singh

- 'Experimental Studies on the Entrance Path of Smallpox' by Prof.
- 'A Statistical Enquiry into School Wyopia by Dr. Banerjee
- A Historical Review of Health Activities in the Philippine Islands' by Dr Intengan

There was no discussion on these papers

Five other papers down for reading were taken as read owing to the absence of their authors

Maternity and Child Welfare

DECEMBER 9TH 10 AM TO 1 PM

Clairman -Dr (Miss) A C Scott (B India) Papporteur -Dr Ruth Young (B India)

Opining papers were read by Dr Jourdran (French Indo-China) on (1) Indications for the Employment of Lituitin in enleabled Women in Hot Climates and (2) Statistics as to the Hour of Birth of Children in the Miternity Hospital

Thereafter papers on the Organization of Child Welfare Work were read by Dr. Ruth Young (B. India), Dr. S. H. Commissariat (U. P., B. India), Dr. Headwards (Bengal, B. India), and Dr. Tilak (Bombay B. India), A. brisk discussion followed Raj Bahadur Dr. Chum Lal. Bose (Bengal, B.

Cof. Russell (Madras, B essumsto tone of her paper as people had trued to run hefore they could creep. He felt that much bad work had been, and was heng done but be outlined the scheme the Madras Government had in hand for giving better training to health visitors. Dr. (lifes) value

The session re opened at 10 o'clock. The discussion on the organization of child welfare work continued. Numerous speakers contributed to the dis

(Madras B India) and

section of the Congress records its emphatic opinion that a trained medical woman should be appointed in each province to act as a Deputy Director of Public Health to organize all the Maternity and Child Wellare work in the province

This resolution did not reach the General Organizing Secretary in time to be placed before the General Business Meeting of the Association and there fore cannot be included amongst the official resolutions passed by the Concrees

SECTION III

Plague

DECEMBER 57H, 11 AM TO 1 PM

Chairman -Col J D Graham IMS (B India)

Rapporteur -- Lt Col J Taylor I MS (Burma B India)

The opening session was held under the presidency of Col J D Graham, CIF IMS (B India) who informed the meeting that the opportunity

of the presence of the members who had expert knowledge of the and co-operate with them for the purpose of discussing the lines on which further

re-earch is deviable and on which control might be based. It Col F P. Mackie, J.M.S. (Bombay, B. India) outlined, the present position of P. Plague problem as it affected various parts of the world and pointed out the nature of the special problems which at pre-ent awaited solution. Papers were then read on the following subjects.

Problems of pneumonic plague-Dr Wu Lien Teh (North China)

Experiments in the transmission of plague by X cheopis and X astro-Dr A N Govle (U.P. B Indis)

An unrecognized type of plague-Dr Cholaj (Bombay B India)

2 TO 4 FM

Charmon -Lt. Col T P Macke, IMS (Bombay, B India)

Papporteur - Lt Col J Taylor, I MS (Burma, B India)

At the afternoon season two further papers were read on Perpetuation of Plague in Wild Rodents by Dr. Wu Lien Teh (Manchuria N. Giuna) and 'Standardization of Haffkine's Plague Prophylactic' by Dr. Naidu and Jame dar Shamsher Jung (Bombay, B. India)

The remander of the time was devoted to discussions on the epidemiology of bubonic plague in which a large number of speakers took part special in terest being taken in Col. Forster's (Punjah, B. India) account of the results of dealing with villages indected late in the plague season as a means of preventing reconderection in the following season.

DECEMBER CTH, 10 AM TO 1 PM

Chairman -- Lt Col F P Mackie, I MS (Bombay, B India)
Rapporteur -- Lt Col J Taxior, I MS (Burma B India)

A very interesting paper was read by Prof. Nilamorov of buratow on Plugue in South East Russia which showed the marked differences in the epidemio

tiens found all of which were capable of carrying plague and none of which were the same as those found in India was illustrated. A discussion then followed on pocumonic plague and the clueval and therapeutic aspects of the disease. To thus discussion was added a resume of a paper on the Triat ment of Buhonic Plague by Dr. Patel and Aban Bahadur C. R. Avan (Bombas B. India)

Cholera.

December 674, 10 am to 1 r u

Chairman -- Dr. A. R. Wellington (Federated Malay States)

Rapporteur -- Lt.-Col A. J. H Russell, LMS. (Madras, B. India)

Lt. Col Russell, IMS (Madras, B India) opened with a paper on Statistical Studies in the Epidemiology of Cholera, in which he gave a symposis of the statistical work on the disease on which he had been engaged for the part avers. Here is 20-1

ın Hıs

humidity accompanied by intermittent rains was the combination which favoured the outbreak of epidemic of cholera

Lt Col Russell also criticized as impracticable the mass inoculation of pilgrims before their attendance at religious fairs and festivals, a method proposed by Sir Leonard Rogers in his recent papers on the Epidemiology of Cholera

Col Dunn (United Provinces, B India), Col Forster (Punjah, B India), Dr Tomh (Bihar and Orssa, B India) and Col Ross (Bihar and Orssa, B India) all took part in the subsequent discussion in the morning, all supporting the objections raised by Col Russell to Sir Leonard Roger's theories

2 TO 4 PM

In the afternoon the papers and discussions were confined to the subject of Variation of Agglutnahility of Vibros Considerable differences of opinion were expressed by Dr Tomb, Captain Matra (Bengal, B India), Oci Russell (Madras, B India), Dr Pand t (Madras, B India), and Dr Mikerjee (Bengal, B India) and it seems that in this subject further work will have to be done hefore a final conclusion is resolved

Dysentery

DECEMBER 7tn, 10 AM TO 1 PM

Chairman -Professor K Shiga (Korea)

Rapporteur -- Lt Col J Morison, IMS (Burma, India)

Egypt their excreta have been for trated by the writer in Bengal Both in the paper and by vanious speakers luring the discussion the fact was brought out that bacillary disentery is far nore frequent than the amount form, the percentages given by different veakers varying from 66 per cent to 90 per cent

A paper on Sprue was presented by Col Macke, who showed that we were till far from knowing what the cause of this disease was and that much work till remained to be done

Bacterrophage.

The paper on Bacteriophage by Dr. D. Herelle (Egypt) opened up a most interesting vista of enquiry and hope. Briefly summinized his statements mount to this, that among the hacilli which attack the human hody and cause issaise there can be developed a disease which attacks and preyes upon the acterna themselves, destroying them and thus producing a cure

2 TO 4 PM

Chairman -Lt Col Morison, IMS (Burma, B India)

Rapporteur -- Dr Digby Roberts (Assum, B India)

Dr F d Herelle read a paper on the Pathology and Epidemiology of Infectious Diseases of the Intestinal Tract and of Cholera in Particular

Dr D Herelle explained that the work embodied in the paper was shared by Major R H Malone IMS and Dr M N Lahiri (B Indir.) The pathology of cholera was studied on patients at the Campbell Hospital, Chieft and the N W or the Dr. the Company of the

represented the moment when convalescence was established Dr D Hercelle detailed the procedure observed in collecting and studying the material Thirty three cases were studied in detail—23 of whom 7 fined were seen in Calcutta and 10 of whom 6 deed in the Paujah Of the 12 deaths 6 died within 24 hours and from none of these was bacterophage isolated virulent for witness from the patient himself or for any other withros. Two died between 48 hours and 48 hours and in those were bacteriophage of feelle virulence was found. In the sew of the 21 patients who survived the existence of a powerful bacteriophage early in the illness in 5 cases was followed by rapid recovery even in cases very senously ill. In the remaining 16 cases the bacteriophage esteadily increased in virulence and without exception reached a high potency between 25 and 72 hours after the commencement of the symptoms the favourable course of the disease corresponding to the increasing activity of the bacteriophage.

The study of the bacteriophage in a community exposed to infection was then recounted. In certain villages where no case of cholera previously existed bacteriophages virulent for cholera vibrios were isolated from well waters and files. These villages

appeared to be immun found in the wells or files latter category no bacternophage and out in the environment out after some days bacternophage virulent for chokra vibrios was obtainable from well appeared for the file of the control of the contro

water and from files The epidemio ceased when contamination by the bacteriophage became generalized

Dr. B. Herelle then read by the dearen.

phy

Mal the

Cruz institute at Rio de Janeiro

minds of the young, just as golf, tenns and chicket were encouraged. The co-operation of mothers ought to be secured in taking care of and in teaching their children. He considered these measures to be very important in any campaign against tuberculosis. A short discussion also took place on the artificial pneumothorax method of treatment of lung tuberculosis in India.

Bacteriology.

DECEMBER 9TH, IO AM TO 1 PM.

Chairman -Dr F d'Herelle (Egypt)

Rapporteur - Captain K R K Iyengar, IMS. (B. India).

The section of bacterology first dealt with two papers on Fungal Infections of the Skin by Dr McGurre (Bengal, B India) and Dr Panja (Bengal, B India) The first dealt with the Colour Variations found in Epidermo-phylon crurs in Culture—the latter with the Morphology and Cultural Charac terrstics of the Malasseau of the Skin These papers were accepted without disoussion A paper on 'Streptococcu in the Tropics' by Dr Bannerjee followed Col Froilano de Mello (Portuguese India) concluded the morning session with a long and interesting communication on the Spirochetal Fauns of the Teeth which dealt thoroughly with this complicated and difficult subject

2 TO 4 PM

Chairman -Dr A H Baldwin (Australia)

Rapporteur - Captain K R K. Iyengar, I MS (B Indis).

At the afternoon session papers were read on 'The Cryptococcus' by Dr Bancerpee (Bengal, B Indis) The Anarohoc Bacterial Flora in cases of Cellulitis and Gangrene by Dr Ukil (Bengal, B India), Acthomycoss Homms by Dr Sur (Bengal B India) and on the Incidence of Anthrax in Industrial Vaterials by Mr Krishnamurt Ayyar, I V9 (Madras, B India) This last paper promoted some discussion on the provisions necessary to render such materials safe for use m which Mr Edwards (U P, B India) and Dr Panja joined

SECTION IV.

Malaria : Control.

DECEMBER 5TH 11 AM TO 1 PM

Chairman —Sir Walter Fletcher, KBE (Great Britain)
Rapporteur —Lt Col C. A Gill, IMS (Punjab, B India)

Sir Malcolm Watson opened the section with a paper on the Future of Malaria Control in the Malay Pennsula, which was followed by an interesting account by Lt. Col S. P. James (Munctry of Health, London) of the proposals of the Malara Commission of the League of Nations in respect of Malara Control in South East Europe Dr. Scharff (Straita Settlements) recounted the result of Mosquito Control Measures in Rural Singapore, after which an interesting discussion, in which Dr. Hoose (Straita Settlements), Dr. Victor Heiser (Rockefeller Foundation), Dr. Wellington (Federated Malary States) and others took part, served to burng out the complex nature of the malary problem, and the necessity of further research, and the diverse methods of control that may be employed in different areas

2 TO 4 PM

In the afternoon the same point was emphasized in a paper on 'The Theory and Tractice of Malaria Control' by Lt Col C A Gill, 13 M (Punjab, B India) Which was followed by papers by D: Strickland (Bengal B India) by Col Matsuno on Waleria in Japan, by Dr. Ramsay (Assam, B India) and by Mr. Iyengar (Bengal, B India)

Malaria : General.

DECEMBER STH, 10 AM TO 1 PM

Chairman -Sir Malcolm Watson (Federated Malay States)

Rapporteur -- Bt Col S R Christophers, I MS (B India)

The discussions on malaria continued and the new point of view of paying special attention to the mosquiou testif which transmits malaria rather than to tal larva which is the objective of most anti-malarial work at present was dealt with by Lt Col. Jacross (Great Birthin). Considerable difference of opinion among experts was found to exist on this point but the point set issue resolved themselves largely must be necessity of fully scaling how very varied are the different conditions under which malaria occurs. An important point was raised by Lt Col. King (Madaria, B. India) which dealt with the necessity of considering public and other engineering works an relation to malaria. Large works are frequently put in hand which actually create facilities for malaria samply because the engineers responsible do not recognize the importance of certain precautions which are described from the point of view of the public health and on which proper expert medical advice should be arranged as a matter of rotume. Sir Makolm Watson (Federated Malay States) pointed out that they had largely got over this difficulty by the appointment of a special malarias engineer.

Malaria : Treatment.

DECEMBER 7rs, 10 AM to 1 PM

Chairman - Professor J W W Stephens (Great Britain)
Rapporteur - Major J A Sinton, I MS (B India)

Col James (Great Britain) read a very instructive paper on 'Experiments in the Treatment of Malaria in Findand' This valuable paper should give all malariologists much food for thought and should stimulate research along

fresh lines He discussed among other points the mechanism of cure in mals rial fevers and some possible factors which may be responsible for variations in the immunity of different persons to infection by the malarial parasite

B India) ther discussed the action of quinine on the malanal paras tes Upon the completion of these papers a very interesting and stimulating discussion occurred in which the following took part—

Prof Stephens (Great Britain) Dr Esch (C P B India) Sir Malcolm Watson (Federated Malay States) Dr Surti (Hyderabad Deccan) Col Gill (Punjab B India) Dr Sarkar (Bengal India) Dr Wullams (Assam B India) Mr Semor White (B India) Dr Murphy (Assam B India) Mr Geimor White (B India) Dr Ghosh (Bengal B India) Col Knowles (Bengal B India)

Replies were given by Col James (Great Britain) Major Sinton and Dr Shaha

2 TO 4 PM

In the afternoon papers were read by Col De Mello (Portuguese Ind a) on Malarial Treatment and by Dr Moresheta (Formosa) on Malaria in Formosa

Kala-azar

DECEMBER 8TH 10 AM to 1 PM

Chairman -Lt Col S P James IMS (Pd) (Great Britain)

Rapporteur -- Dr L E Napier (Bengal B India)

The kala azar section was opened by Lt Col Knowles (Bengal B

Commission working in Assam and how they had call set to be a further by showing that the sandfles mouth parts actually became infected it had been proved that the sandfly almost certainly injected the parasite that the manner of the investigation namely to show that the manner had been proved that the sand of the assandfly was still wanting. He is could not infect a fana or even an even

an and the experimental animal were very resistant to infection he produced evidence to support this apparently amiliary amiliary and the thought that it was necessary to make further experiments in reducing the powers of resistance to infection of experimental animals Major Shortt (B India) gave a short description of the life history of Lessimania donorum the parasite of hala azar in the sandily and in man,

he added a further description of what he believed to be the method by which man becomes infected when bitten by an infected sandfly Dr. C W. Young ... The second section is stimulating discussion followed these three papers Lt Col W C Ross (Bihar and Orissa, B India) put forward the suggestion that insufficient epidemiological work had been done on this problem and that the contaminative theory of transmission was worthy of more consideration. Other members, including Col Christophers (B India), Col Megaw (Bengal, B India), Dr Brahmachers (Bengel, B India), and Dr Napier (Bengal, B India) spoke The two former were of the opinion that the evidence was so strongly in favour of the sandfly being the transmitter that work on this insect alone should be continued for the time being. Lt Col Knowles summarized the discussion and dealt with the various points that had arisen He pointed out that Col Ross was wrong in complaining that little epidemiological work had been done a great deal of epic emiological evidence had been sifted and it was as a direct consequence of this work that the sandily had been first incriminated as a possible transmitter. He replied to other points that had been raised

A paper was then read by Dr B M Das Gupta (Bengal, B India) and another by Lt Col Acton (Bengal, B India) on the Viode of Action of Antimon) in Kala-szar

Protozoology, Typhus-like diseases and Leptospiræ.

DECEMBER 9TH, 10 AM TO 1 PM

Chairman -Col S L Brug (Netherland Indies)

Rapporteur -- Lt Col R knowles, IMS (Bengal, B India)

Lt-Col R Knowles, I MS (Bengal, B India) read a paper on the Influence of the Thyroid Gland on the Course of a Protoroal Infection via surra. It

H knowles then read a paper on Avin Spirochastons: The cycle in both the vertebrate host, the fonl, and in the invertebrate host—the tink, Argin pressure, was discussed in detail. In the fowl there is a single attack of fever and spirochastes may be present for 2 to 7 days in the blood. No evidence was found of any granule phase, or of phagocytous of the approchates. The drease strumentes in body which recover by the spirochastes forming min enormous tangles in the blood. In which the spirochastes gradually become immobile and then disniferate. In the fed tick, the wast majority of apirochastes achieved the spirochastes are similar by tangles and disniferate. The feath a survey, however, spailly divide down until there are produced awarms of minute, tene?

Ourse. These invide the body-cavity of the tick about the third ay, and from it all the viscers. There is a progressive mission especially of the salivary glands, and the tick become the tick become the 6th day. No evi-

dence of any granule phase was found The paper was discussed by Dr Dal (Bombay, B India) and Major R B Lloyd (Bengal, B India)

2 TO 4 PM.

Chairman -Dr Naosuke Onodera (Japan)

Rapporteur -- Lt Col R Knowles, IMS (Bengal, B India)

In the afternoon a paper was read by Lt Col J W D Megaw, I M (Bengal, B India) on Typhus like Fevers caused by Ticks The author related his own personal experience of having contracted such a fever after a bite from a tick He then discussed the scattered sporadic cases of typhu like fever occurring after tick bites in Hyderabad, Saugor, and elsewhere Also other groups of cases of similar character which have been recorded from various areas in India, the Federated Malay States, and elsewhere, but when no history of a bite from a tick could be obtained. The similarity of this feve to Rocky Mountain spotted fever and Brill's disease was discussed Th paper was followed by a considerable discussion in which Dr Schobl (Philip pine Islands), Major Thompson (U P, B India) and Dr Strickland (Benga B India) took part

typhus which occurred in Southern Queensland whilst he was on leave a Australia in 1925 type describe by Col Megaw, and affected thos working in agricult

er suspicion a animal reservoirs of the disease, and transmission was probably by mite-

A paper was then read by Dr C Strickland on an Epidemic of Psendo

Dr Otto Schobl (Philippine Islands) then read a paper on Experimenta Frambosia in the Monkey This was illustrated by a splendid set of lanters slides showing every phase of the disease in experimental monkeys, the pri mary yaw papule, the metastatic lesions, the lesions on the hands and feet and the ulcerative late lesions which occur in the neighbourhood of joints The experimental production of gangosa by inoculation with Treponemo pertenue was fully demonstrated, and the modes of invasion of the nose and pharynx discussed Dr Scholl's paper was very much appreciated by a large audience and was one of the most noteworthy contributions to the Congress

Medical Entomology.

DECEMBER 9th. 10 AM TO 1 PM AND 2 TO 4 PM.

Chairman -Bt Col S R Christophers, I VI S (B India) Rapporteur -- Captain P J Barraud (B India)

The following papers were read -

- 1 The Morphology of the Buccal Cavity of the Mosquito by Captain Barrand and Major Covell (B India)
 - 2 Regional Distribution of Anophelines and Malaria in Bengal by Mr.

- 3 Parasitic Nematodes of Anopheles hyZiMr, Iyengar (Bengal, B India)
- 4 Protozoan Parasites of Anopheles by Mr Iyengar (Bengul, B India)
- 5 The Classification and Identification of Members of the Genus Phlebotomus, etc., by Major Sinton (B. India)
- 6 The Breeding of Sandfiles in Nature and in the Laboratory by Dr Smith (Bengal, B. India)
- 7 The Seasonal I revalence of House Flies in Korea by Dr Kobayashi (Japan)

These papers were followed by interesting discussions in which Col Christophers (B India), Sir Malcolin Watson (Federated Malay States), Col Dinn (U P, B India), Col Gill (Ponjab, B India), Major Shortt (B India), Mr R Senior White (Bengal, B India), Major Sinton (B India) and others took part.

Helminthology.

DECEMBER STH, 2 TO 4 PM

Chairman -Col I Froilano de Mello (Portuguese India)
Rapporteur - Dr V T Korke (B India)

A most interesting paper was read by Professor Hata on the Prophylaxis of Chlonorchis on behalf of Dr. Nagano (Japan)

A aummary of a paper on the 'Ento parasites' found in the Tarabagan by Dr La Yuan Po (China) was given by Col F de Mello, the Chairman

DECEMBER 9th, IO AM TO I PM AND 2 TO 4 PM

Chairman -Dr Hucheng Hsiang (China) Rapporteur -Dr V T Korke (B India)

Papers on Hookworm were read by Dr Kendrick (Rockefeller Foundation), Dr Sweet (Rockefeller Foundation) and Dr Korke (B India) The papers proved to be very interesting and were much discussed.

Nutration

DECEMBER 5TH II AM TO I PM AND 2 TO 4 PM

Chairman - Lt Col Edward B Vedder (U S A)

Rapporteur -- Major Chve Newcomb, I MS (Madres, B India)

The day opened with a most convincing paper by Col McCarrison (B

India) on the Effect of Faulty Nutrition on the Production of many of the Common Discusses of India. He concluded by syung "When physicians medical officers of health and the Ly public learn to apply the primciples which the newer knowledge of nutrition has to impart, when they know what maintrition means, when they look upon it as they now look upon set up and learn to avoid the one as they now avoid the other, then will this knowledge do for medicine what assepsis has done for aurgery'

In the course of the day Col McCarrison read four other papers, Major Sokhey (Bombay, B. India), Major Newcomh (Madra, B. India), and Dr. Bose (Bengal, B. India) one each, all dealing with Autritional subjects. The

discussion was keen but good humoured

Deficiency and Endocrane Diseases.

DECEMBER 6TH IO AM TO I PM AND 2 TO 4 PM

Chairman -Dr Victor G Heiser (U S A)

Rapporteur - Major Clive Newcomb I MS (Madras, B India)

The papers on Epidemic Dropys and Beri beri by Lt. Col. Yegaw and Lt. Col. McCarryson led to a long and most interesting discussion in which 12 members took part. The discussion revolved round the questions in the first place whether beri heri and epidemic dropsy were the same disease or were different degrees of one wide disease group. In the second place discuss on centred on whether the cause of the disease group was one of vitamin definency or was due to a toxin derived from the grain or to the action of both these factors. The question of the conditions under which food is stored was especially emphasized by Col. Megaw who pointed out that this question had not been given sufficient attention. There was general agreement that the means of preventing these diseases was at hand and consisted in the provision of a well balanced pure visitamin rich food. A paper on the Prophylaisand Care of Ben bert by Vitamin Preparations was read by Dr. Jansen (Jara) and Dr. Donath (Jara) who demonstrated the vitamin solated by them

SECTION V

Immunology, Chemico-therapeutics

DECEMBER 7TH 10 AM TO 1 PM AND 2 TO 4 PM

Chastman -Dr S Hata (Japan)

Rapporteur Captain L R K Iyengar I MS (B India)

An important paper on Some Factors Influencing the Therapeutic Value of Salvarsan was read by Professor Hata (Japan) and was followed by a very interesting discussion in which Drs. Napier (Bengal B. India). Gupta (Bengal B. India) and Sarkar (Bengal B. India) took part.

The following other papers were read and discussed -

- Relation between Chemical Constitution of Antimonials and their Therapeutic Properties by Dr. Brahmachari (Bengal B. India)
- 2 Chemotherapy of Bubonic Plague by Father Caius and Dr Aaidu (Bombay B India)
- 3 Further Evidences on Lipo doplide Antigen Antibody Reaction by Professor Taniguchi (Japan)
- 4 Development and Duration of Immunity by Inoculation and Remoculation by Col Harvey and Capt Iyengar (B India)
- 5 Some clinical aspects of the Wassermann test by Major Lloyd (Bengal British India)
- 6 La Syphil metrie by Major Labernadic (French India)
- 7 The use of Æthoxyaisminoaczalmlactate in Tropical Cohtis by Dr. Urchs (Bengal B India)

Pharmacology.

DECEMBER STH 10 AM to 1 PW AND 2 TO 4 PM

Chairman -- Dr B C P Jansen (Netherland Indies)
Rapporteur -- Lt Col P N Chopra I MS (Bengal B India)

Rapporteur—Lt Col R N Chopea 1 US (Bengal B Inha)
Owng to the indisposation of Professor Read (China) his paper on the
Action of Ephedrine was read by Wajor Hitchens (Philippine Islands) In
the disgussion that followed Col Chopea (Bengal B India) pointed out

B India) read a paper on The Stability of Chlor de of Lame pointing out that this compound deteriorated when kept perfectly dry Col Chopra

ue reason both among the miants ame acques. Ame mont prod on payer a as well as mental deterioration. Dr. Ressler (China) read a paper on the letton of Cardinzol which is an excellent circulatory and respiratory stimulant. Dr. Kubota (Dlanchura) read a paper on the Investigation he is carrying with the Chinaes Drugs and pointed out the difficulty of proper definification of these drugs. Dr. Onodera (Japan) read an interesting paper on the Physiological Action of Innos and suggested an entirely pow aspects of their action.

Rabies

DECEMBER STH 2 TO 4 PM

A paper on Rabies and Antirable Treatment was read by Lt. Col. Cunning ham (B. India) in which the author described the differences in resistance of different strains of rabies virus, both street, and fixed to the action of either

SECTION VI

Vetermary

DECEMBER 7th 10 AM TO I PM

Clair an -Col 1 J Williams R 11 C (B India)

Papporteur -Mr F Ware INS (Madras B India)

The papers read included two on Boyine Tuberculous in India by Mr. it wards and Dr Soparkar of the Imperial Institute of Veterinary Research, Muktesir which were much appreciated

2 to 4 PM

Churman,-Dr V Nakamura (Japan)

Raj porteur - Mr F Ware (Wadras B India)

In the afternoon amongst several intere ting papers was one by Dr Vlaya moto (Formosa) on Urocystitis Harm trhagica of Astive Cattle

- 0

DECEMBER STH, 10 AM TO 1 PM

Chairman - Mr J T Edwards (U P, B India)

Rapporteur - Mr F Ware (Madras, B India)

The section resumed its sittings on Thursday morning to hear two papers by Hr Edwards on the Recent Advances which have heen made at Muktesar in the Study of Rinderpest

In closing the meetings of this section the President referred to the small number of vetermarians who had attended to hear some very interesting lapers a remark with which all those present readily agreed.

TOURS HELD IN CONNECTION WITH SEVENTH CONGRESS, FAR EASTERN ASSOCIATION OF TROPICAL MEDICINE.

December 11th to December 24th, 1927.

The tours originally organized in connection with the 7th Congress were a Northern Tour, a Southern Tour and a tour through the province of Bihar and Orissa. The tour through Bihar and Orissa had to be cancelled at the last moment due to want of support on the part of the members

Northern Tour.

To Benares, Lucknow Delhi Agra, Sanchi, Bombay and back to Calcutta with Sub tours to Lahore and Kasauli and back to Delhi

DECEMBER 11TH

A party of 57 delegates and their wives left Calcutta at 3 24 P M hy special train on Sunday December 11th

Десемвек 12тп

Beares was reached at 6 a M. The delegates were met by the Collector of Beares departations from the Beares municipality and University and members of the Local Committee. They were first taken down the niver to work the bathing and humang chast and then visited the Golden Temple and other aghts in the city. The remainder of the morning was spent at the Water Works where an Exhibition of Arts and Carlts and Suntary Ethibits were inspected. They then attended a lunch given in their honour by the citizens of Beares After lunch a visit was first pead to the Hindu University where the delegates were met by the Vice Chanceller Pandit Madan Mohin Malaviya and then to Sarint of Buddhist fame.

DECEMBER 13TH

The tour left Benares in the evening and reached Lucknow early next morning

The party was met by the Commissioner and Deputy Commissioner of Lucknow together with membes of the Local Committee and deputations of the Lucknow minimerpality and University representatives of whom well comed the delegates with speches belitting the occasion

After breakfast the whole party under the execut of the Deput Commissioner visited Dillihubia Mungfield Brait the Sikandira Bugh the Chatter Mannil Residency, Bira Imembara Hussanabad, the Water Works and Kassar Bugh The Science Section of the Caming College and the Medical College were visited after himel. Later in the afternoon the delegates were

pect t and party

REPORT OF THE COMMITTEE ON BERLBERI OF THE PHILIPPINE ISLANDS

I INTRODUCTION

om-

five thousand one hundred (P 5,100) pessos has been approved for investigation and propaguida work, the International Health Board contributing with one hundred (P 100) pessos

The Committee was appointed on October 18, 1926, and held 8 meetings up to the present time for the discussions of the different aspects of the problem

The Committee is composed of the following —Dr. Fernando Calderon, Col. Edward B. Veddar, Major A. Parker Hitchens, Dr. Linis Guerooro, Dr. Laborio Gomez, Dr. José Fabella, Mr. A. H. Wells, Dr. Isabelo Congeption, Dr. José Albert and Professor F. G. Santos members and Dr. L. Lopez Rinal, Charman

II PRESENT SITUATION OF BERL BERL IN THE ISLANDS

No change has been noted in the situation of ben berr in the islands since

Mortality from bers bers in the Philippines

Year	Blamla	Provinces.	Total
1910	140	4 125	5 569
1911	1 331	4 367	5 698
1912	1 1056	4 372	3 423
1913	696	3 194	3 890
1914	839	4 10	4 940
1915	872	4 336	A 203
1916	694	8 874	6,5,3

1925 .	897	17944	18,81
19*6	526	18 678	19 204

^{*} Intluding deaths registered in Manife among non readents.

N- - 4

lysis of the facts, that might have contributed to this phenomenon, failed to show any other important factor than that errors may have possibly been made in the diagnosis, knowing that the death certificates and the diagnosis, of causes of death strited therein, are usually prepared by laymen

Judging from the death returns, bern bern is the third in the list of the more important causes of death in the Philippines, and contributes to our general mortality in about 8 per cent of the total mortality. Ninety one per cent of the total deaths from bern heri occurs as infantile heri heri (deaths among infants under one year).

There are annually an average of 16 500 deaths, in round numbers, as cribed to infantile heri beri which represents 28 10 per cent of the total deaths under one year of age, and 43 24 per thousand hirths

Bern hern prevails during the months of October, November, December and January

The disease is widely distributed of Dt. - however is great variation in the range of mortal to the mortality statistics compiled

Cavite Nueva Ecija Bataan, Riral, Laguna, Batangas, Tarlac, Bulacan, and the Islands of Mindoro and Marinduque contribute with the highest rates of mortality (from 20 to 51 per 10,000 population).

III Rice

It is still generally admitted that where nice forms the staple of diet heri heri prevails

At the last meeting (Tokoo 1925) of the Far Lostern Association of Tropical Medicine resolutions were approved to the effect that the Governments concerned should encourage research towards developing a practical test to distinguish nice, that may cause or prevent here bern and that facts be collected which may be used in elassifying rice in its different stages in the process of milling. The Committee is fortunate in having amongst its mem hers Colonel Edward B Vedder, Chairman of the United States Army Medical Research Board in the Philippines well known for his previous works and investigations on bein her in the islands who has willingly undertaken the task of performing the investigation of this aspect of the problem. After about two years work, he submitted a lengthy report, of which, for the sake of hersity, only parts will be quoted throughout this report

Importation and production of rice in the Philippines —From tables pre pared by the previx by the Bureaus of the amount of nee punes The Table.

below shows in kilograms the amount of importation and production of rice -

109

Importation and production of rice in the Philippines

Year	Total rice in kilograms	Total ner produced	Total ner imported	Percentage
1910	734 373 033	37 046 819	1973 5200	*6 37

Our production of rice is steadily increasing to total the tanding this fact the importation which ought to have decreased had during the last three years relatively increased in proportion to the production. However comparison of bein her mortality and increased rice importation does not ahow any noticeable correlation.

I oriente of nec and nec a alls—In the investigations performed by the previous committee the correlation of the different varieties of nec and presence of modern nee mills in each particular locality has been studied. The conclive on arrived at from the studies made was that no correlation entered the number and presence of nee mills in the locality and that no agmificant correlation is there between the different varieties of nec and be tween the mortality taken from the death returns. If any correlation was noted it was due to the degree of poly-hing the proportion of \$2.9\$, content, the legere of unjoishing etc. rather than the difference in variety

Standard: atten of rice—This part of the work of the Committee has been totally undertaken by the memler of the Committee, Colonel Vedder, with the co-operation of Mr. N. T. Fehrano, chemiet of the Bureau of Science.

In the Philippines for a good proportion of rice a 0.5 per cent P20, con tent may probably be regarded as a fair standard for rice. The above was

a statement copied from the report of the previous Committee on Ben ben It is realized that the standard, as it was found, if it has any significance, is only local and perhaps not applicable to other countries. It is further known to all the difficulties of applying this standard as it is not always dependable due to the practice of some nee dealers in the Philippines to mix nee polishing with the sample submitted for examination, thus increasing to some extent the PaO₂ content

Degree of unpolish content in rice, and taken as an index f

(by microscopic method) determined the degree of unpolishing (the method described in previous report)

with lities

recommended that the investigations on the standardization of rice be continued

Fortunately for the present committee, at the time of its creation Colonel Vedder of his own accord as Charman of the U A Army Medical Research Board had already started to work on this aspect of the problem, the results of which were made available for the preparation of this report

Two hundred different samples of nee grown in different localities and of all degrees of miling were subjected to a series of studies by, lst, deter mining the percentage of the external layer of the grain still adhering to them (degree of polishing) 2nd, examining them chemically, and 5rd, determining their hen her producing potentialities by actual feeding to pigeons.

To determine the percentage of the external layer left in the grain, instead of using the incroscopic method employed by the last Committee, Giam's nodine staming method was used. One significant fact noted from the results obtained is that out of 200 samples. 7 showed 0 per cent of percent premaining and theee were among the choice and over milled rices from Pampanga, (3) Nivera Equa (1) and Hongkong (3) glutinous which is not commonly used.

Percentage of penearp	Number of
remaining	samples
0	* 80 00 0 7 5 4 5 5 6 9

Percentage of persuarp	Number of		
remainings	samples.		
59-60 per cent.	3		
61-65	2		
66-70	4		
71-53	7		
70-80	13		
81-85	11		
81-95	40		
96-109	22		

except for cakes, awestmeats, etc., and that when nat we rices are found pounded or under milled, a large proportion of them contain not less than 75 per cent of percent percanning. These results will be further discussed in connect on with their relation to ber her. It should be taken into consideration that the method cannot be taken as an exact measure of the remaining percent for rices having less than 59 per cent of their external layers. An error of at least 10 per cent should be taken into account. However, for rices with the external layer should be taken into account. However, for rices with the external layer practically intact and for those completely deprived of it, more accurate results are obtained.

Ohemical analysis — Chemical analysis of the total 200 samples were made for the determination of moisture, fat, P2O3 ash, nitrogen and amido nitrogen.

All results were calculated on the original weight of the rice, rather than the dry weight, because this is tho method in general use in determining the P2Q content of rices submitted for routine analysis, since rice is not sold or consumed by dry weight. However, the percentages by dry weight were calculated and are also as a solution of the percentages of the percentage of the percentages of the percentage of

results, whether calculations were made on original weight, or dry weight

I Feeding experiments—To determine the ben her producing potentiality of the different varieties of nose under various degree of milling, feeding experiments in pigons were performed (about 90, prome recommendation). Pigons were selected for feeding, because they are own more so while to polymeunits this fowls and are realth bradled. Four pigeons were found and produced and the produced as any of the food was given, except water, which is provided abundantly in each cage. The pigeons were observed every day and the date of the first symptoms of polymeunits, as well as other subsequent pixals as, are carefully noted down and recorded. When the birth were on the point of teach, they were traited by a luministering small amounts of nee polithings (this tiki) or an extract of the same. Prompt recovery almost merganishy followed, which thus confirmed the previous diagnosis of polymeunits. When death occurred in eases of doubt the largest as the same forms.

or for other reasons the experiments on that rice were repeated with a new group of birds

Beri beri producing factor - Colonel Vedder has worked out a coefficien hich he calle factors wer

and the raphanty of development of the disease. The pertendage of the forms to total number of pigeons used in the experiment divided by the average number of days elapsing from the trine the rice was first fed until the first symptoms of polyneurits appeared will represent the coefficient thus the higher the percentage of the birds that develop polyneurits and the shorter the depletion period the greater the coefficient will be

The first symptoms of polyneurius occasionally appeared as ear y as fifted days after feeding. In cases that none of the birds developed the disea after 100 days of feeding. It was assumed that the nice afforded sufficient protection and the experiment was discontinued. Since the pigeons are mor susceptible to polyneuritis than men. It may reavonably be claimed that an nice that protects pigeons for 100 days will prevent the appearance of hen let us man even when used as an exclusive due, which is seldom the case.

Results of anisatigation and stanuing of remaining periodity—Out of the 20 samples of nee examined 115 or 57 50 per cent of the total showed a perceit age of over 50 remaining perceity while 85 or 42 50 per cent showed 50 or less than 50 per cent per carp remaining. In companing these perceiting obtained with the heit bein produced and the bert hert factor it is shown the no noe having 50 per cent or more perceit remaining produced polyneum in pigeous at the same time it may be noted that 17 other samples harm less than 50 per cent external layers of the gran protected significant the disease as follows: I sample of noe out of 15 having only 10 per cent. 5 rices out of 17 having 20 per cent. 2 rices out of 5 having, one per cent. 3 rices out of 4 having 20 per cent. 5 rices out of 50 having, one of 50 having are to 50 having to 50 having

On the other hand experiments performed seemed to suggest the possibility that at the v tomic contents not a way as existing ely contained in the external layers of the rice and that the most highly milled contain traces or vitamin because of the fact that pigeons fed on a synthetic duct composed or cont starch 90 per cent egg albumen 8 per cent sait maxture I per cent and could liver oil I per cent developed polyneurity much faster than when fed on the most highly milled one.

Only under milfed noe was used in the diet of the Philippine Scouts since 1910 followed by the complete disappearance of ben ben from the sick list among them Seven symples used in this series of 200 examinations were secured from rices furnished the Philippine Scouts. Out of these 7 samples only one had as low as 88 per cent percarp and the remaining 6 samples ranged from 92 98 per cent. The remarkable success in the prevention of ben ben among the scouts was undoubtedly due to the method used in selecting noe for their diet. The method is therefore to be recommended as the best

Phosphorous pentoxude—The P₂O₅ standard is better than the ash but is not nearly as good as the fat standard. Out of 200 samples examined for P₂O₅ content, 21, or 105 per cent, was found to contain lower than the old 0.45 proposed standard for bern bern preventing tree and 179 or 89.5 per cent had the limit (0.45) or more. In comparing these findings with the results of feeding experiments, it was found out that the old standard 0.4 per cent is too low to be safe. Pigeons feed on nees having a minimum of, 0.62 per cent of P₂O₅, did not develop polymentis.

A total of 99 samples of rice were found to have at least 0 62 per cent P₂O₅ and afforded complete protection At the same time there were others that, coming below this minimum, afforded just the same protection. On the other hand, other nees having similar or relatively higher percentage of P₂O₅ than the old standard did not protect from ordivernities as shown in

the following Table :-

Samules of race producing polyneurities in macons

2 Fat+P,O,	3 07	17	Less than P,O,+Fat but better than
2 Fat+Ash+P,Os	3 94	13	Not as good as the P.O. + Ash + Fat

In coming to the selection of the best index for the standardization of rice, several factors should be considered, viz, simplicity in the procedure, easiness in determination, time employed in its determination, practicability of its application and other minor things to suit every particular locality and condition. But is as general index, the Committee may suggest the following recommended by Col Vedder thus. Any rice having 177 per cent of P.O., plus fail but not less than 0.4 per cent P.O. or any rice not having less than 0.6 per cent or any rice not having less than 0.6 per cent or any rice in the size of the per cent removing external layers. —One handered and twenty-mine nees continuing not less than 1.77 per cent of the totals of these constituents afforded complete protection. Out of this total, only one constands a lattice as 0.4 per cent of P.O., It is to be observed that only nine out of all the samples that afforded protreation to pipers a rice reclaimed when the above requirements are possessed. There is, therefore no possibility of excluding, from the practicability view point, a lings proportion of rice for having less than the required P.O. percentage or other constituents.

Clessification of rice in its different steges in the process of milling—To formulate a more definite understanding in the designation and naming of the different degrees of milling of rice, the determination of the remaining percarp by imspection and rodine staining is suggested as the most practical.

these having 21-49 per cent, medium milled rice and from 50-100 per cent

Effects of preparation of sice for food on the vitamin content — The different procedures used in different countries in the preparation of rice for food may

as porridge rice, while others cook it with only enough water to cook and dry The Filipino way of preparing and cooking rice is in detail as follows (i)

times until the washing is almost (lear (\$\epsilon\$) add enough water to level of about 3 or 4 centimeters above the surface of the nee and (\$\epsilon\$) put on the fire to

Taking into consideration that the anti-neutric vitamin is feely soluble in water, it may be presumed that nice trivited in this way would readily lose part of its ben bein preventing power. Experiments performed, by the previous Committee, on the P₂O₅ content of washed and unwashed noe, showed a reduction of this constituent after washing, the average difference in the ten samples examined being 0.25 per cent less in washed as compared with the unwashed. The practice of rubbing the nee against the inner sides of the

pot is the common way of cooking noe in the Philippines, instead of the mere washing alone in the experiments, will undoubtedly remove a good portion of the external layers, and consequently reduce to a greater portion the percentage of $P_a O_c$ content of the rice grains

The local method of preparing and cooking rice should always he taken into account as a factor of relative importance when we come to consider the local heri incidence.

The index suggested for the standardization of rice provides a consider able margin of safety

Transportation and storage—Transportation of nice does not offer any problem in connection with the prevelance of heir hen, except penhaps as regards the hags used in the transportation. Paddy rice (privg) does not after much whether packed in old or new, clean or dirty hags, but milled received to the same from every deterioration. Rice, during transportation especially in long voyages should be protected against mosture. Fortunately in the Philippines, inter island communications are not commonly long enough to affect much the quality and keeping property of milled rice.

I On the other hand, storage presents certain aspects which should be given consideration, administratively speaking Paddy rice is usually stored honger than nine months in the Philippines, while rice after milling rarely remains longer than three months hefore it goes to the consumer. As a matter of fact paddy rice under normal circumstances when in properly ventilated and water proof storehouses does not usually deteriorate after many months or even years. There are different kinds of rice (palay) which deteriorate easily within a short time (gangan and others) hut these varieties are raised in very insignificant quantities and only in certain localities of the blakmas in the control of the palay which is the control of the palay which is the control of the palay which is the control of the palay when the control of the palay when the palay we have the control of the palay when the palay we have the palay when the palay we have the palay when the palay when the palay we have the palay when the palay when the palay we have the palay when the

duty old hags or insect conta

kind of rice and on the degree of polishing and whiteams to which it has been subjected in the milling process as well. In the last Report of the Beri ben Committee, the rapidity of deterioration has been the subject of detailed the latter can be the latter can be

The deterioration found consisted in the loss of the rice polishings, the destruction of the germs and the Lernel and the subsequent reduction of P_2Q_2 content. The most important factors found contributing to the deterioration of rice while stored were (a) the polishing itself, due to its hygrescopic property; (b) the mites, (c) new weevel and rice beetle

While trying to find out the most suitable standard for ben ben preventing tice, the following experiment was performed — Ten kilos of each sample of rice were purchased. The rice was kept in tightly covered tin cans in a dir store room, each can being labelled with the serial number of the rice. As

experience promptly showed that weevils, moth and other mites develop in

lasted '

Whether the long storage and detenoration suffered from affects or not be potentially of her her preventing nee needs further studies and investigations. Instances are there that prove that long stored under milled nee, although musty and unfit for human consumption, still prevented the development of polyneuritis on fowls, when fed as an exclusive diet. In a special series of experiments, performed by Col. Vedder, twenty detenorated and heavily infected samples of nee were selected, analysed and fed on pigeous. The results were that none of them proved to be beri her preventing nee, it should be noted that 7 out of the 30 samples contained organisly 17 not of P.O., plus fat, which is accordance with the previous experiments should have prevented polyneuritis.

Several methods have been suggested to prevent the deterioration of roo caused by insects. The use of carbon tetrachloride, of heat, as it is length widely used in the United States, and of chloroform proved to be effective.

provisions are nowhere strictly enforced

IV. DIAGNOSIS OF BERI BERI

Several times, in the course of the studies that have been made by the various Cross the

correctnes mortality

seldom seen in Manila (City), and the same condition might be occurring in the provinces By a resolution of the present Bern ben Committee, it was decided that a climican be appointed to conduct an investigation on the diagnosis of her ber in the provinces Dr Agerica B M Siaon was appointed and given the following instructions—In order to have a more dependable.

ton of the diagnosis will be made on (a) cases of ben ben found in the dispensaires and puerculture centres, both adults and infants (b) deaths from ben hen as stated in the death returns, both adults and infants, (c) ventythe errors in diagnosis separately in both cases (d) make a separate survey to see actually whether or not the disease is really increased. The provinces of Nueva Ecna, Cavite and Bataan which appeared to morbidity from bern been, besides Mania, hoother physician Dr E Salnd of the helped Dr Suon in this investigation

which was started in March 24 in Manila and lasted until May 31 in the province of Bataan

The towns of San Jose, Muños, Alaga and Talavera were visited in Newa Escija, the municipalities of Rozano Mendez, Alfonso, Bailen, Kawit, Norekts, Imus and Tanza were unevitigated in Cavite and in the province of Bataan the work done in the province of Balaiga Pilar and Oran. In the selection of these municipalities, the high morbidity and mortality from the disease and the facilities of communication were taken into account.

RESULTS

(a) Manila—Twenty seven cases were all the cases investigated in Manila during the short period of time available. Out of this total, 23 wer among adults and four cases among infants. Twenty four of this total were confirmed, gring an error of 11 1 per cent in diagnosis. Out of seven deaths supposed to he due to infantile beri her five were confirmed with an error of 28 58 per cent. It must be said that all the seven cases of infantile

investigations

- (b) Nurta Ecya A total of 201 hring cases and 18 dead of hera-ber were investigated Out of 201 hring cases, 189 were among adults and 12 miants of which 140 cases in adults and 10 in the infants were confirmed, giving a total error of diagnosis in 25 37 per cent or 25 39 per cent and 16 67 per cent of error for adults and infants respectively. Out of 18 deaths supposed to have been caused by bern bern in this province, all among infants 15 were confirmed, giving a correct diagnosis in 88 33 per cent and an error of 16 67 per cent
- (c) Cattle—Eight municipalities have been visited in this province and of 184 living cases and 35 deaths diagnosed as heri heri have been investigated. Among the bring cases only low infants, while among dead cases 23 were infants. The errors of diagnosis found were 16 8 per cent in living cases and 66 per cent in dead cases. All cases among infants were confirmed in 100 per cent while infants whose deaths were attributed to beriheri, 52 12 per cent of the diagnosis were found incorrect.
- (d) Batann—Very few cases and deaths from ben ben were investigated in this province due to the short period of time available. There were in total 17 living cases and 22 deaths investigated. The errors found were 6 per cent in living cases and 455 in dead cases. No living case was found mining infants while out of the total 22 deaths diagnosed as ben ben, grang.

an error of 45 5 per cent in diagnosis A résumé of the findings and errors is given in the following Table —

Errors found in the diagnosis of bery bery

		Uan:	na l	Nurva Edja			Cavite			Ratasm		
	V mber ave tig d	N mber Conft ed	Percent error	Sove Sat d	Annaber Gun fir ned	Person crear	Nu pber In ostigated	Tumber Confirmed	Percent error	Nember	N her	Perc at error

Dead Total	7	١,	28 6	18	15	12 27	25	n	56 00	22	12	45 45

But the wide variation of errors found does not give the gauge of these errors nor can the Committee formulate an acceptable standard for the same that can be applied to our death returns and obtain a corrected death from bern bern It is to be considered further that the number of cases investigated in each province were scarce the provinces vasted very few that it is not believed they constitute a representative number enough to draw conclusions therefrom. One fact however had become known to the Committee and this was that in actual living cases personally seen by health officers in the

death certificates in the provinces are prepared by laymen and the diagnosis stated therein have had to be based on the history of the disease and few data given by the informant who in the majority of the cases being a mere family friend or neighbour might have not even seen the case.

Another thing that the Committee cannot but over comphisize is the fact that no matter how great the error found was in the drignosis of ben bern in the death returns the importance of the bern bern problem in the Philippines as a health problem cannot be minimized nor underestimated 40 53 per cent was the error found in diagnosis of fatal cases in the three provinces. If applied to our mortality figures in the provinces for the last few years they would show that ben bern in the provinces has as was stated been increasing. The following Tables of mortality from ber her in the provinces from 1910 to 1917 uncorrected and from

1918 to 1926 inclusive corrected on the basis of $40.63~\mathrm{per}$ cent error is given for information

V COMMON DIET OF FILIPING LABORING CLASS

The Fulpuno laboring class is the group of the population mostly affected by bern bern. The investigation of the last Committee showed that 69 18 per cent of the cases of bern heri occurred among the poor class of the population. Our laboring class has very meagre earnings and therefore they cannot be expected to get a varied and more balanced diet. If we admit that bern ben is a vitamin deficiency disease as it is the general consensus of opinion it has to he admitted or at least it should be expected that bern ben must be a prevailing disease among our people of the poor class taking into consideration their poor salary and that nee is the staple diet. The estimate of the day cost of lawing in various provincial capitals according to data obtained from the Bureau of Lahor give the following amount for food for the different years.

Daily cost of food

Years,	1910	1918	1920	19 5.
A magle labourer	P 0 43	P 0 65	P 0-84	P 0-71
A family with two soults and three minors	P 0 66	P I ºI	P 14°	P 1°5

The daily cost of food for a family of two adults and three minors in various localities in the Philippines was also given by the Bureau of Labors as follows

San Jose Ant que Legazp Albay Cebu Cebu		Lacag II Norte S Fernando Union	P 148 P 097 P 10 P 1°8
Dayso Dayao	P 15	Average	

It would be worth mentioning also that the wage earners population in the Philippines is estimated (Burean of Labor) at 2 857 401 which is about 25 per c facts would be be bern in too big

In the investigation of 600 families with a listory of her heri among their members it was found out by the last Committee that the number of staples of diet besides rice which were most commonly consumed may be reduced to seen varieties. It was also found out that the common diet of families in the common diet of families.

more com In spite

amount of each variety of food meested and consequently an insufficient ritamin for the requirements of the metabolism or are there other factors the member of the sections made

studies and investigations be performed

Taking advantage of the investigations to be performed in various provinces for the venification of diagnosis. Professor F C Santes offered human to work and study for the Committee in this respect. Professor Santes visited three provinces. Nursin Edga Cavile and Bataan and with the co-operation of one assistant made quantitative and qualitative studies of the common diet of bern ben families as compared with that of non-ben ben families (infortunately not having finished his experiments on the different varieties of food he had not been able to submit his report in time to be included here. However Professor Sautes has apparently come to the conclusion that the diet of the ben ben families although composed of different varieties inching at the submitted of the submitted of

hen ben due to their individual hisings of virtumin deficient foods. As soon as the report of Professor Santes is submitted, the same will be published as an appendix to this report.

VI EDUCATIONAL CAMPAIGN CONFERENCES LECTURES PAMPHLETS

appine Health Service through its medical officers is co operating with this work. The work performed in this respect during the last year was as follows—

- (a) Publication of some hints on ben ben prevention and actology in the daily papers
- (b) Cinematographic projections on the prevention and causes of beriberi (translated in different local dialects)
- (c) Conferences on the same subjects given to the teachers in Baguic

- (d) Conferences on the same subject in the towns and barnes by Presdents of Sanitary Divisions and District Health Officers as part of their duties
- (c) Publication of a pamphlet on the ætiology, symptoms and prevention of berr herr. This pamphlet is being translated into different dialects.

VII TIEL TIEL PRODUCTION

The thi this production in the Islands has not increased during the last few years. This this extract is the only product known by the people to cure bert bert, and it is the most commonly used. The Bert bert Committee has again recommended the purchase of enough material and machinenes to increase production for free distribution.

VIII SHMMAPY

- 1 Ben hen is a prevailing disease in the Philippines. It is decreasing in Manila, but slightly increasing in the Provinces.
- 2 The importation of rice has relatively increased during the last three years although our local production has also increased.
- 3 Correlation exists between the local production of rice and the incidence of beri beri
- 4 Beri beri prevails during the months of October, November, December and January
- 5 Bern bern is widely distributed in the islands, although there is a wide variation in the rates of mortality
- 6 The proportion of the external layers remaining on a given rice may be determined with reasonable accuracy by inspection after staining with Gram stoding solution.
- 7 Rices examined by inspection method, after staining having 50 per cent or more of the external layer, do not produce polyneuritis when fed to pigeons
 8 Selection of rice by using the minimum 50 per cent external layers
- remaining as standard, through staining and inspection method, may prevent beri beri.

 9 This method may be used for the classification and naming of the
- 9 This method may be used for the classification and naming of the different stages of rice during the process of milling
- 10 Amido nitrogen is useless as a chemical index , 105 per cent ash is a poor index , 062 per cent P_2O_5 content is better, and 128 per cent fat is a much better index.
- 11 Rice having 1 77 per cent P₂O₅ plus fat but not less than 0.4 per cent P₂O₅ content, and rices having not less than 0.62 per cent P₂O₅, or rice having not less than 0.62 per cent P₂O₅, or rice having the less 1.75 row cent of the external These rices excluded

- 12 Rice becomes deteriorated while stored and the causes of deterioration and mainly dampness and insects
- 13 Under milled rice deteriorates earlier and more rapidly than the overmilled rice
- 14 The different trial methods of preparing rice for food affects the P₂O₂ and presumably the vitamin content
- 15 Errors in diagnosis of ben ben in the city and the Provinces, not only in hving cases but also in fatal cases were found. There is wide variation in the errors found in different localities.
- 16 No matter how great the error found was, there is no doubt that the problem of ben here is of capital importance in the islands
 - 17 Our labouring and poor classes are the most affected by beri beri
- 18 The average daily cost of food for a family of two adults and three minors is P 1 25 The amount is considered too small to permit an abundant food.
- 19 The duct of ben ben families as found by the investigation, although varied, seems to be inadequate in amount

IX RECOUNEYDATIONS

- 1 Eighty per cent remaining external Livers of the grain of noes, determined by staining and inspection method, may be recommended as standard for the selection of nress for institutions and armies. This is not recommended as a legal standard.
- 2 Ruces with 0—20 per cent of the external layers should be called highly-nulled rice. Those having 21—20 per cent underna milled rice and those having 50—100 per cent under milled rice. In the determination of the percentages of remaining external layers the Gram todium stamming and inspection method should be used.
 - 3 The production of highly milled tree should be discouraged
- 4 Aby nce having 177 per cent of P, 0, plus fat, but not less than 04 per cent P, 0,, or any nce not having less than 042 per cent P 0,, or any nce having loss for cent P, 0, and with the less: 15 per cent of the external layers of the grain remaining is suggested as the dentitive chemical index.
- 5 The production of vitamin containing home vegetables should be encouraged
- 6 A wide campaign of education for the spread of knowledge about berrberr prevention chould be continued
